

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Elective course C: Light and Lighting

Course

Field of study

Electrical Engineering

Area of study (specialization)

Electronics, measurements and lighting technology

Level of study

First-cycle studies

Form of study

part-time

Year/Semester

4/8

Profile of study

general academic

Course offered in

polish

Requirements

elective

Number of hours

Lecture

10

Laboratory classes

20

Other (e.g. online)

Tutorials

Projects/seminars

Number of credit points

3

Lecturers

Responsible for the course/lecturer:

Krzysztof Wanadchowicz, Ph.D, D. Sc., Eng.

email: Krzysztof.Wanadchowicz@put.poznan.pl

tel. 616652397

Faculty of Control, Robotics and Electrical Engineering

Piotrowo 3A Street, 60-965 Poznań

Responsible for the course/lecturer:

Małgorzata Zalesińska, D. Sc., Eng.

email: Malgorzata.Zalesinska@put.poznan.pl

tel. 616652398

Faculty of Control, Robotics and Electrical Engineering

Piotrowo 3A Street, 60-965 Poznań

Prerequisites

The student starting this course should have a basic knowledge of physics, visible radiation and lighting engineering. Basic skills in measuring electrical and photometric parameters. The ability to effectively self-study in a field related to the chosen field of study.

Course objective

Providing students with in-depth information on visible radiation, photometric and colorimetric parameters, and the construction and operation of lighting equipment. To acquaint students with the practical aspects of photometric and colorimetric measurements and testing of lighting equipment.

Developing students' ability to choose the measuring method and appropriate measuring equipment for the problem.

Course-related learning outcomes

Knowledge

1. Knows the spectrum of solar radiation and the differences in spectral distributions between the sun and electric lamps.
2. Has knowledge in the field of photometry, colorimetry and lighting equipment, knows and understands the laws associated with optical radiation.

Skills

1. Is able to use his knowledge in the selection of equipment and measurement methods for photometric and colorimetric parameters in order to perform the measurement and acquisition of basic measurable quantities characteristic of lighting engineering in typical and atypical conditions.
2. Is able to properly use luxmeters, colorimeters, photometers and spectrophotometers in accordance with general requirements and technical documentation.

Social competences

1. Is aware of the contribution of their own work for the good of the team and the workplace and the need to comply with professional ethics. Is able to cooperate in a team and take over various functions during the implementation of a given task.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Knowledge acquired as part of the lecture will be verified by the colloquium passed on the 5th lecture. The test consists of 15-20 questions (test and open), variously scored. Credit threshold: 51% points. Final issues, based on which questions sent to students by e-mail are developed using the university e-mail system.

Skills acquired as part of the laboratory are verified on the basis of at least one presentation or test report containing the analysis of the results obtained, the conclusions of the measurements and a discussion regarding the results obtained. Assessment threshold: positive evaluation of the presentation or test report.

Programme content

Lecture: Sources of visible radiation. Methods and principles for measuring photometric parameters. Construction and principle of the departments of measuring apparatus used for measuring light quantities. Estimation of measurement errors of light quantities. Photometric standards. Geometric systems for presenting photometric properties of lamps and luminous. Parameters and characteristics of lamps. Discharge lamps, LED - basic principles, structures, characteristics. Systematic of luminaires. Light management systems.

Laboratory: Practical exercises in the field of: determining the photometric solid of light, testing photometric features of a lumen meter, testing luminance meters, testing photometric and electrical parameters of lamps for home use, lighting control systems.

Teaching methods

Lecture: multimedia presentation (drawings, photos, charts) supplemented with examples given on the board.

Laboratory: Performing practical tasks under the supervision of the lecturer. Discussion related to results obtained during measurements.

Bibliography

Basic

1. Żagan W.: Podstawy technik świetlnej. Oficyna Wydawnicza Politechniki Warszawskiej, Warszawa 2014.
2. Wiśniewski A.: Elektryczne źródła światła. Oficyna Wydawnicza Politechniki Warszawskiej, Warszawa 2010.
3. Żagan W.: Oprawy oświetleniowe : kształtowanie rozsyłu strumienia świetlnego i rozkładu luminancji , Oficyna Wydawnicza Politechniki Warszawskiej, Warszawa 2012
4. Dybczyński W,,: Miernictwo promieniowania optycznego, Wydawnictwa Politechniki Białostockiej, Białystok 1996.

Additional

1. Lighting Handbook, Reference & Application. IES of North America, New York 2010
2. Bąk J., Pabjańczyk W.: Podstawy techniki świetlnej. Wydawnictwo Politechniki Łódzkiej, Łódź 1994.
3. Materiały dydaktyczne dostępne na stronie: <http://lumen.iee.put.poznan.pl>

Breakdown of average student's workload

	Hours	ECTS
Total workload	72	3,0
Classes requiring direct contact with the teacher	45	2,0
Student's own work (literature studies, preparation for laboratory classes, preparation of measurement results and preparation of reports, presentations, preparation for tests) ¹	53	2,0

¹ delete or add other activities as appropriate
