POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

COURSE DESCRIPTION CARD - SYLLABUS

Course name Modeling of Heat Processess

Course

Field of study	Year/Semester	
Industrial and Renewable Energy	2/2	
Area of study (specialization)	Profile of study	
Thermal Engineering and Renewable Energy	general academic	
Level of study	Course offered in	
Second-cycle studies	Polish	
Form of study	Requirements	
part-time	compulsory	

Number of hours

Lecture Lab 30 Tutorials Pro

Laboratory classes 30 Projects/seminars Other (e.g. online)

Number of credit points

2

Lecturers

Responsible for the course/lecturer:

Dr inż Jędrzej Mosiężny

Responsible for the course/lecturer:

Email : jedrzej.mosiezny@put.poznan.pl

Faculty of Environmental Engineering and Energetic

ul. Piotrowo 3, 60-965 Poznań

Prerequisites

The student has a basic knowledge of thermodynamics and fluid mechanics, combustion, principals of numerical methods in fluid dynamics

POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

Course objective

Present students with skills in area of numerical methods in heat transfer processes.

Course-related learning outcomes

Knowledge

Has etended knowledge on thermodynamics, combustion and fluid dynamics

Knows and understands the fundamental aspects of development of the energetic industry.

Knows and unsderstands the fundamental aspects if modeling of the industrial energy systems and devices

Skills

Is able to utilize gained knowledge to search and interpret acquired information to solve typical and non-typical problems in modeling of heat processes.

Is able to utilize gained knowledge to adapt existing or create new tools to support solving non-typical problems in heat process modeling.

Is able to form and test hiptheses on simple implelentations of industrial energy devices

Social competences

Student is ready to critically assess knowledge and received information

Student is ready to recognize the importance of knowledge in solving cognitive and practical problems and to seek expert opinions in case of difficulties in solving the problems

Student is ready to think and act in an entrepreneurial way

Methods for verifying learning outcomes and assessment criteria Learning outcomes presented above are verified as follows: passing the laboratory

Programme content

- 1. Reminder: numerical methods in fluid dynamics
- 2. Governing equations, derrivation of governing equations to FVM suitable form
- 3. Steady state thermal analysis
- 4. Transient thermal analysis
- 5. Conjugate heat transfer analysis
- 6. Analysing heat exchangers

POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

Teaching methods

Computer Laboratory

Bibliography

Basic

Teoria procesów przepływowych, cieplnych i dyfuzyjnych, Stefan Jan Kowalski, Wydawnictwo Politechniki Poznańskiej, 1999

Additional

Fundamentals of Heat and Mass Transfer. Frank P. Incropera, David P. DeWitt, Theodore L. Bergman, Adrienne S. Lavine

Thermodynamics. RAO, Y. V. C. Rao

COMPUTATIONAL FLUID DYNAMICS. The Basics with Applications. J.D Anderson

Breakdown of average student's workload

	Hours	ECTS
Total workload	60	2,0
Classes requiring direct contact with the teacher	30	1,0
Student's own work (literature studies, preparation for	30	1,0
laboratory classes/tutorials, preparation for tests/exam, project		
preparation) ¹		

¹ delete or add other activities as appropriate
