

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

# **COURSE DESCRIPTION CARD - SYLLABUS**

| Course name                          |                    |                                      |
|--------------------------------------|--------------------|--------------------------------------|
| Aspects of Heat Transfer             |                    |                                      |
| Course                               |                    |                                      |
| Field of study                       |                    | Year/Semester                        |
| Industrial and Renewable Energy      |                    | 2/2                                  |
| Area of study (specialization)       |                    | Profile of study                     |
| Heat and Renewable Energy            |                    | general academic                     |
| Level of study                       |                    | Course offered in                    |
| Second-cycle studies                 |                    | Polish                               |
| Form of study                        |                    | Requirements                         |
| full-time                            |                    | compulsory                           |
| Number of hours                      |                    |                                      |
| Lecture                              | Laboratory classes | Other (e.g. online)                  |
| 15                                   |                    |                                      |
| Tutorials                            | Projects/seminars  |                                      |
| 15                                   | 15                 |                                      |
| Number of credit points              |                    |                                      |
| 2                                    |                    |                                      |
| Lecturers                            |                    |                                      |
| Responsible for the course/lecturer: |                    | Responsible for the course/lecturer: |
| dr inż. Damian Joachimiak            |                    |                                      |
| email: damian.joachimiak@put.pozr    | nan.pl             |                                      |
| tel. 61 665 2209                     |                    |                                      |
| Faculty of Environmental Engineerin  | g and              |                                      |
| Energetic                            |                    |                                      |
| Prerequisites                        |                    |                                      |

Basic knowledge on selected heat flow processes and thermodynamics in fluid-flow machines and equipment.

Ability to describe and calculate complex heat flow processes. The ability to effectively self-study in a field related to the chosen field of study.

Is aware of the need to expand their competences, readiness to cooperate within the team.

#### **Course objective**

Introduction to the description of the phenomena of heat transfer and computational methods for heat exchangers.

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

### **Course-related learning outcomes**

#### Knowledge

Student has extended knowledge of the latest scientific discoveries and technical solutions in the field of heat exchange.

Student has knowledge of the basic processes occurring in heat exchangers.

Student has in-depth knowledge of methods of temperature, pressure and fluid streams measurements.

#### Skills

Student is able to use his knowledge and skills to adapt existing or create new technical solutions related to heat flow processes.

Student is able to solve research and engineering tasks requiring the use of engineering standards and norms and the use of technologies appropriate for industrial and renewable energy.

Student is able to design and conduct experiments and simulations as well as analyze and interpret their results.

#### Social competences

Student is ready to critically assess knowledge and received content in the field of heat exchange.

Student is ready to recognize the importance of knowledge in solving cognitive and practical problems and to seek expert opinions in the event of difficulties in solving the problem independently.

Student is ready to perform responsible professional roles, taking into account changing social needs, including:

- developing the profession's achievements,
- maintaining the ethos of the profession,

- compliance with and development of the principles of professional ethics and actions to comply with these principles.

#### Methods for verifying learning outcomes and assessment criteria

#### Learning outcomes presented above are verified as follows:

Knowledge acquired as part of the lecture is verified by a final exam consisting of 5 to 6 questions with various points depending on their level of difficulty. Passing threshold: 50% of points. Final issues on the basis of which questions are prepared will be sent to students by e-mail using the university e-mail system.

Classes will be conducted at the blackboard (chalk or white), the student is required to have a calculator.

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

Skills acquired as part of the project classes are verified on the basis of short presentations during the semester, questions from the teacher and on the basis of the final project developed. Passing threshold: 50% of points.

#### **Programme content**

Phenomena of heat transfer processes and their description.

Dimensional analysis and similarity conditions.

Heat transfer processes in exchangers.

Heat exchangers geometries.

Calculation methods of heat exchangers.

### **Teaching methods**

Blackboard lecture with multimedia presentation.

The lecture will be conducted using a multimedia presentation. Classes will be conducted at the blackboard (chalk or white), the student is required to have a calculator.

Project classes: discussing theory and assumptions for classes on the board and performing tasks given by the teacher, independent work on the design task.

### Breakdown of average student's workload

|  | Hours | ECTS |
|--|-------|------|
| Total workload   | 60    | 2    |
| Classes requiring direct contact with the teacher              | 47    | 2,0  |
| Student's own work literature studies, preparation for project | 15    | 0,0  |
| classes; preparation for exam <sup>1</sup>                     |       |      |

<sup>&</sup>lt;sup>1</sup> delete or add other activities as appropriate
