Prerequisites

Basic knowledge about the life cycle of machines

Course objective

-The aim of the course is to familiarize students with theoretical and practical issues in the field of manufacturing techniques applied in the machine industry, with particular emphasis on market economy conditions.

Course-related learning outcomes

Knowledge

P6S_WG_01 knows issues related to engineering issues (physics, chemistry, materials science, manufacturing technologies, material strength, mechanics)

P6S_WG_06 knows the issues of the life cycle of products, devices, facilities, systems and technical systems

P6S_WK_03 knows development trends and best practices in the field of security engineering

Skills

P6S_UW_01 is able to properly select the sources and information derived from them, making an assessment, critical analysis and synthesis of this information

P6S_UW_06 is able to critically analyze the functioning and assess - in conjunction with the Safety Engineering existing technical solutions, in particular machines, devices, objects, systems, processes and services

Social competences

P6S_KK_03 is aware of the understanding of non-technical aspects and effects of engineering activities, including its impact on the environment and the associated responsibility for the decisions taken

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Formative assessment:

- a) in terms of laboratories: on the basis of an assessment of the current progress of the tasks.
- b) in lectures: on the basis of answers to questions about material modified in previous lectures.

Summary:

- a) lecture - written test on the basis of previously prepared questionnaire
- b) written laboratory pass.
