

## COURSE DESCRIPTION CARD - SYLLABUS

Course name

Modern imaging techniques in bioengineering

---

### Course

Field of study

Biomedical engineering

Area of study (specialization)

Level of study

Second-cycle studies

Form of study

full-time

Year/Semester

1/2

Profile of study

general academic

Course offered in

polish

Requirements

elective

---

### Number of hours

Lecture

15

Tutorials

Laboratory classes

15

Projects/seminars

Other (e.g. online)

### Number of credit points

3

---

### Lecturers

Responsible for the course/lecturer:

prof. Ewa STACHOWSKA

email: ewa.stachowska@put.poznan.pl

tel. 61 663 32 30

Faculty of Mechanical Engineering

ul. Piotrowo 3, 60-965 Poznań

Responsible for the course/lecturer:

Ph.D., D.Sc., Eng. Bartosz GAPIŃSKI

email: bartosz.gapinski@put.poznan.pl

tel. 61 663 35 69

Ph.D., Eng. Karol GROCHALSKI

email: karol.grochalski@put.poznan.pl

tel. 61 663 32 23

---

### Prerequisites

Knowledge of basics of metrology and optics as well as mathematical analysis and statistics, technical

drawing, machine parts and non-destructive testing. Willingness to acquire new knowledge and skills. The ability to think logically and use information obtained from various sources.

### Course objective

Acquainting with non-destructive methods in metrology in bioengineering.

### Course-related learning outcomes

Knowledge

1. The student should characterize methods of non-destructive testing in metrology
2. The student should characterize the basic devices used in non-destructive testing

Skills

1. The student is able to select the device for the measuring task
2. The student is able to develop a basic measurement strategy
3. The student is able to develop and analyze obtained results

Social competences

1. The student is able to work in a group
2. The student is aware of the role of non-destructive testing in bioengineering

### Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture: written or oral test

Laboratory: crediting on the base of an oral or written answer concerning the content of each performed laboratory exercise and preparation of reports. In order to pass the classes, all exercises must be completed.

### Programme content

Lecture:

1. Definition, structure and tasks of non-destructive testing in metrology.
2. Measuring devices used for non-destructive testing.
3. Passive thermography.
4. Active thermography.
5. Sources of excitations in active thermography.
6. Tests of the thickness of coatings.
7. X-ray micro computed tomography.

8. Possibilities of product evaluation on the basis of computed tomography.
9. Optical interferometry and holographic microscopy to investigate physical properties of subtransparent biomedical materials.
10. Vibrometry and shearography to assess local deformations and stresses of materials.

#### Laboratory:

1. Measurements using a thermographic camera.
2. Measurements with the use of an active thermal imaging system.
3. Measurements with the use of computed tomography - basics.
4. Detection of defects and non-destructive testing with the use of computed tomography.
5. Measurements using optical interferometric methods and holographic microscopy.
6. Detection by non-contact methods: holographic vibrometry and shearography local deformations, stresses and internal defects.

#### Teaching methods

Lecture: multimedia presentation illustrated with examples given on the whiteboard and films.

Laboratory exercises: performing experiments, case study, discussion, working in a group.

#### Bibliography

##### Basic

B. Więcek, G de Mey: „Termowizja w podczerwieni. Podstawy i zastosowania”, Wydawnictwo PAK, Warszawa, 2011.

W. Minkina: „Pomiary termowizyjne – przyrządy i metody”, Wydawnictwo Politechniki Częstochowskiej, Częstochowa 2004.

E. Hecht, "Optyka" Wydawnictwo Naukowe PWN, Warszawa 2012.

##### Additional

O. Breitenstein, M. Langenkamp: „Lock-in Thermography”, Springer-Verlag Berlin, Heidelberg 2003

X. Maldague: "Theory and Practice of Infrared Technology for Nondestructive Testing". John Wiley & Sons Inc., New York 2001.

R. Christopp, H.J. Neumann: "X-ray Tomography in Industrial Metrology, Precise, Economical and Universal", Verlag Moderne Industrie 2011, ISBN 978-3-86236-020-8.

B. Ziętek: "Optoelektronika", Wydawnictwo Uniwersytetu Mikołaja Kopernika, Toruń 2005.

P. Hariharan: "Optical Holography; Principles, Techniques and Applications", Cambridge University Press, 2nd edition, Cambridge 2008.

B. Gapiński: "Obrazowanie i pomiary w technicznej tomografii komputerowej ze szczególnym uwzględnieniem przedmiotów wykonanych technikami przyrostowymi i analizy nierówności powierzchni". Wydawnictwo Studio Poligrafia, ISBN 978-83-953889-0-3, 2019.

### Breakdown of average student's workload

|   | Hours | ECTS |
|---|-------|------|
| Total workload  | 75    | 3,0  |
| Classes requiring direct contact with the teacher   | 35    | 1,4  |
| Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation) <sup>1</sup> | 40    | 1,6  |

<sup>1</sup> delete or add other activities as appropriate
