

## COURSE DESCRIPTION CARD - SYLLABUS

Course name

Kinetics of liquids and gases

### Course

Field of study

Construction and Exploitation of Means of Transport

Area of study (specialization)

Level of study

First-cycle studies

Form of study

part-time

Year/Semester

1/1

Profile of study

general academic

Course offered in

polish

Requirements

elective

### Number of hours

Lecture

18

Laboratory classes

Tutorials

9

Projects/seminars

Other (e.g. online)

### Number of credit points

2

### Lecturers

Responsible for the course/lecturer:

dr Edyta Janeba-Bartoszewicz

email: edyta.janeba-

bartoszewicz@put.poznan.pl

tel. 616652497

Responsible for the course/lecturer:

Faculty of Civil Engineering and Transport

### Prerequisites

Knowledge: The student knows the basics of physics and chemistry as well as the basics of thermodynamics and fluid mechanics

Skills: Student use of terminology terms in the field of mechanics, thermodynamics, physics and chemistry. Correct description of the observed phenomena, analysis of the obtained results and drawing conclusions.

Social competences. Work in an interdisciplinary team. Ability to lead a team and expand team knowledge.

### Course objective

Getting to know the basic relationships showing the physical and chemical properties of gases.

## Course-related learning outcomes

### Knowledge

Student has basic knowledge in the field of chemistry, in the construction of the periodic table of elements and their properties, the theory of chemical bonds, organic and inorganic compounds, types of chemical reactions, chemical analysis: in the scope enabling the understanding of lectures on metallic and non-metallic materials, sciences on environmental protection, fuels and lubricants, building materials and soil, biomechanics and biological materials processed by agricultural and food machinery.

Has knowledge in the field of physics, including the basics of classical mechanics, optics, electricity and magnetism, solid state physics, quantum and nuclear physics, necessary to understand specialist lectures in the field of the theory of construction materials and materials science, theory of machines and mechanisms, theory of electric drives and mechatronic systems .

### Skills

Student can obtain information from literature, the Internet, databases and other sources. Can integrate the obtained information, interpret and draw conclusions from it, and create and justify opinions in Polish and foreigners, can integrate the obtained information, interpret and draw conclusions from it.

Has the ability to self-educate with the use of modern teaching tools, such as remote lectures, internet websites and databases, teaching programs, and e-books.

### Social competences

Student is ready to critically assess his knowledge and received content. Can think and act in an entrepreneurial manner.

## Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

The knowledge acquired during the lecture is verified on the basis of a written exam in the form of a test.

The skills acquired during the exercises are verified on the basis of a final test in the form of a written test.

## Programme content

Characteristics of the gas and liquid state. Thermodynamic properties: ideal, semi-perfect and real gas equations of state, compressibility factor. Viscosity of gases and liquids, depending on pressure and temperature. Influence of gases and liquids on pipeline materials. Influence of aggressive ingredients, anti-corrosion and anti-erosion protection. Combustion. Phase equilibria in multicomponent systems. Osmotic phenomena in two-component systems. Osmosis, dialysis. Donnan's membrane equilibria. Diffusion. Kinetics and mechanism of phase changes.

## Teaching methods

Information and problematic lecture with a multimedia presentation. Exercises - solving problems.

## Bibliography

### Basic

1. J. Szargut: Termodynamika techniczna, PWN 1991
2. J. Molenda: Gaz ziemny, PWN 1999
3. H. Buchowski, W. Ufnalski „ Fizykochemia gazów i cieczy”, Wydawnictwa Naukowo -Techniczne, Warszawa 2012

### Additional

1. K. Pigoń, Z. Ruziewicz: Chemia fizyczna, PWN 2012

## Breakdown of average student's workload

	Hours	ECTS
Total workload	50	2,0
Classes requiring direct contact with the teacher	27	1,0
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation) <sup>1</sup>	23	1,0

<sup>1</sup> delete or add other activities as appropriate
