

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Basics of designing elements and assemblies of machines

Course

Field of study

Year/Semester

Construction and exploitation of means of transport

2/4

Area of study (specialization)

Profile of study

general academic

Level of study

Course offered in

First-cycle studies

polish

Form of study

Requirements

full-time

compulsory

Number of hours

Lecture

Laboratory classes

Other (e.g. online)

30

Tutorials

Projects/seminars

30

Number of credit points

4

Lecturers

Responsible for the course/lecturer:

PhD. Eng. Krzysztof Talaśka

email: krzysztof.talaska@put.poznan.pl

Tel. No.: 61 665-2244

Faculty of Mechanical Engineering

Piotrowo Str. 3, 60-965 Poznań

Responsible for the course/lecturer:

PhD. Eng. Dominik Wilczyński

email: dominik.wilczynski@put.poznan.pl

Tel. No.: 61 224-4512

Faculty of Mechanical Engineering

Piotrowo Str. 3, 60-965 Poznań

Prerequisites

Knowledge: The student has knowledge of physics (mechanics in the field of: statics, kinematics and dynamics), mathematics, after being passed in the study program

Skills: The student has the ability to solve problems in the field of mechanics, strength of materials, selection of materials based on their knowledge and the ability to obtain information from the indicated sources

Social competences: The student understands the need to expand their competences, shows readiness to cooperate as part of a team

Course objective

1. To teach students the basics of machine construction, within the scope defined by the curriculum content specific to the field of study.
2. To develop students' skills:
 - calculating and constructing machine elements and assemblies,
 - documenting and reading technical documentation based on the knowledge gained from the object machine engineering graphics,
 - practical use of knowledge gained from the following subjects: mechanics, material strength, mechanical engineering, material science.
3. to improve students' teamwork skills.

Course-related learning outcomes

Knowledge

Student has basic knowledge in the field of machine construction and machine and mechanism theory, including mechanical vibration.

Student has basic knowledge of standardized rules of structure recording and engineering graphics.

Student has basic knowledge of material strength, including the basics of the theory of elasticity and ductility, stress hypotheses, methods of calculating beams, membranes, shafts, connections and other simple structural elements, as well as methods of testing the strength of materials and the state of deformation and stress in mechanical structures.

Skills

Student can plan and realize the process of constructing uncomplicated machine assemblies or machines and formulate requirements for electronic components and automatic control systems for industry specialists in mechatronic systems.

Can prepare technical documentation for a descriptive-drawing engineering task.

Social competences

Student is ready to critically assess his knowledge and content.

Student is ready to acknowledge the importance of knowledge in solving cognitive and practical problems and to consult with experts in case of difficulties in solving the problem on his own.

Student is ready to perform responsible professional roles, including:

- Observing the rules of professional ethics and demanding it from others,
- care for the achievements and traditions of the profession.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Written exam from the lecture, project execution.

Programme content

Basic principles of the design process, elements of the mechanism, characteristics of the types of loads, defining loads and formulating appropriate strength conditions. Connections and their calculation: soldered, welded, glued; riveted, shaped connections: key, bolt, threaded connections. Screw mechanisms: examples and application, design calculations. Flexible elements: springs, rubber flexible elements.

Teaching methods

Lecture, project

Bibliography

Basic

1. Praca zbiorowa pod red. Z. Osińskiego, Podstawy konstrukcji maszyn, PWN, W-wa, 1999
2. Praca zbiorowa pod red. M. Dietricha: Podstawy konstrukcji maszyn. Tom 3, WNT, Wa-wa, 1999.
3. J. Żółtowski, Podstawy Konstrukcji Maszyn, Oficyna Wydawnicza Politechniki Warszawskiej, 2002.
4. R. Knosala, A. Gwiazda, A. Baier, P. Gendarz, Podstawy Konstrukcji Maszyn, WNT, Warszawa 2000.
5. A. Dziurski, L. Kania, A. Kasprzycki, E. Mazanek, Przykłady obliczeń z Podstawy Konstrukcji Maszyn, Tom 1 i 2, WNT, Warszawa 2005.

Additional

1. Dietrich M., Podstawy konstrukcji maszyn, Wydawnictwo Naukowo Techniczne 1995.
2. Niezgodziński M. E., Niezgodziński T., Wzory, wykresy i tablice wytrzymałościowe, Wydawnictwo Naukowo Techniczne, 1996,
3. Sempruch J., Piątkowski T., Podstawy konstrukcji maszyn z CAD, Piła, Państwowa Wyższa Szkoła zawodowa w Pile, 2006,
4. Bahl G., Beitz W., Nauka konstruowania, WNT, Warszawa 1984

Breakdown of average student's workload

	Hours	ECTS
Total workload	120	4,0
Classes requiring direct contact with the teacher	60	2,0
Student's own work (literature studies, preparation for tests/exam, project preparation) ¹	60	2,0

¹ delete or add other activities as appropriate
