

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Risk managemet of aviation

Course

Field of study	Year/Semester
Aviation and cosmonautics	2/4
Area of study (specialization)	Profile of study
-	general academic
Level of study	Course offered in
First-cycle studies	polish
Form of study	Requirements
part-time	compulsory

Number of hours

Lecture	Laboratory classes	Other (e.g. online)
18	0	0
Tutorials	Projects/seminars	
9	0	

Number of credit points

4

Lecturers

Responsible for the course/lecturer:

dr inż. Anna Kobaszyńska-Twardowska
email: anna.kobaszynska-twardowska@put.poznan.pl
tel. 61-224 45 11
Wydział Inżynierii Lądowej i Transportu
ul. Piotrowo 3, 60-965 Poznań

Responsible for the course/lecturer:

dr inż. Piotr Smoczyński
email: piotr.smoczynski@put.poznan.pl
tel: 61 665 28 41
Wydział Inżynierii Lądowej i Transportu
ul. Piotrowo 3, 60-965 Poznań

mjr dr inż. Sławomir Szrama

email: slawomir.szrama@put.poznan.pl
Wydział Inżynierii Lądowej i Transportu
ul. Piotrowo 3, 60-965 Poznań

Prerequisites

Knowledge: The student understands the concept of a system and is able to define social systems, systems in transport. The student has basic knowledge of historians, has knowledge of the reliability of technical tools. The student is able to calculate entries to the path of elementary and preliminary steps. The student is fluent in a suite of computer office programs. The student understands the requirements

for system testing. The student placed the competences at the disposal of the tasks indicated for implementation..

Course objective

Getting to know the methods and acquiring practical skills in the field of risk management of threats identified in selected areas of analysis related to transport, in particular in aviation.

Course-related learning outcomes

Knowledge

1. Student has a structured, theoretically founded general knowledge covering key issues in the field of flight safety and risk assessment
2. Student has extended knowledge necessary to understand the profile subjects and specialist knowledge about the construction, operation, air traffic management, safety systems, economic, social and environmental impact in the field of aviation and space
3. Student has detailed knowledge related to selected issues in the field of human capabilities and limitations in aviation and aerospace
4. Student has basic knowledge necessary to understand social, economic, legal and other non-technical conditions of engineering activity.

Skills

1. Student can develop a safety instruction for a simple and medium complex on-board device, machine or technical flying object under specific environmental conditions
2. Student is able to apply basic technical standards for unification and safety and recycling
3. Student Can use the language of mathematics (differential and integral calculus) to describe simple engineering problems

Social competences

1. Student understands the need for lifelong learning; can inspire and organize the learning process of other people
2. Student is aware of the importance and understands the non-technical aspects and effects of engineering activities, including its impact on the environment, and the related responsibility for decisions made
3. Student is able to interact and work in a group, assuming various roles in it

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture: on the basis of a written test.

Classes: based on the evaluation of the developed exercise reports.

Programme content

Demand for security analysis. The concept of a safety management system (SMS). Risk management as an element of SMS in aviation. Aviation risk management levels and types of risk. Sources of threats, threats, undesirable events, risk of threats, identification of sources of threats and threats, characteristics of threats, activation of threats, levels of opportunities and levels of effects of activation of threats. Risk models, generalized risk model, risk models in known risk assessment methods, risk estimation. Valuation / valuation of risk risks - risk categories. Risk management - generally about models of security systems. Risk monitoring and risk communication. Exercises in applying risk management methods procedures in the areas of analysis related to transport, in particular in aviation.

Teaching methods

Informative (conventional) lecture (providing information in a structured way) - may be of a course (introductory) or monographic (specialist) character

The exercise method (subject exercises, practice exercises) - in the form of auditorium exercises (application of acquired knowledge in practice - may take various forms: solving cognitive tasks or training psychomotor skills; transforming a conscious activity into a habit through repetition)

Bibliography

Basic

Breakdown of average student's workload

	Hours	ECTS
Total workload	100	4,0
Classes requiring direct contact with the teacher	50	2,0
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation) ¹	50	2,0

¹ delete or add other activities as appropriate
