

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Zjawiska powierzchniowe i kataliza przemysłowa (Surface phenomena and industrial catalysis)

Course

Field of study Year/Semester

Technologia chemiczna (Chemical Technology) 1/2

Area of study (specialization) Profile of study

Technologia chemiczna ogólna (General Chemical Technology) general academic Level of study Course offered in

Second-cycle studies Polish

Form of study Requirements

part-time

Number of hours

Lecture Laboratory classes Other (e.g. online)

compulsory

20

Tutorials Projects/seminars

0

Number of credit points

2

Lecturers

Responsible for the course/lecturer: Responsible for the course/lecturer:

Krystyna Prochaska, BEng, PhD, DSc, ProfTit Barbara Górska, BEng, PhD

e-mail:krystyna.prochaska@put.poznan.pl e-mail:barbara.gorska@put.poznan.pl

Tel. 61 665 3601; room 322A Tel. 61 647 5986; room 833

Faculty of chemicla Technology, Faculty of chemicla Technology,

Institute of Technology and Chemical Institute of Chemistry and Technical

Engineering Electrochemistry

ul. Berdychowo 4, 60-965 Poznań ul. Piotrowo 3, 60-965 Poznań

Prerequisites

Basic knowledge of general chemistry, physical chemistry, thermodynamics, as well as chemical technology and chemical engineering, and also widely understood environmental protection; ability to obtain information from indicated sources.

Course objective

This lecture aims to present knowledge about surface phenomena at the interface: gas/liquid, liquid/liquid and liquid/solid as well as information about the kinetics of chemical reactions, homo- and

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

heterogeneous catalysis and elements of biocatalysis discussing examples of applications of catalytic processes in industry and environmental protection. In addition, the lecture introduces elements of tribology and electrokinetics of sorption processes.

Course-related learning outcomes

Knowledge

K_W4 - has improved knowledge of kinetics, thermodynamics, surface phenomena and catalysis of chemical processes

K_W6 - has improved knowledge of the newest chemical and material technologies, knows current trends in the development of chemical industrial processes

K_W14 - has knowledge of selected aspects of modern chemical knowledge

Skills

K_U1 - has the ability to obtain and critically evaluate information from the literature, databases and other sources, and formulate opinions on this basis

K_U12 - has the ability to adapt knowledge about chemistry and related fields to solve problems in the field of chemical technology and planning new industrial processes

K_U15 - is able to critically analyze industrial chemical processes and introduce modifications and improvements in this area, using the acquired knowledge, including knowledge about the latest achievements of science and technology

Social competences

K K1 - is aware of the need for lifelong learning and professional development

K_K2 - is aware of the limitations of science and technology related to chemical technology, including environmental protection

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Written/oral exam graded on the basis of a points system (0-100 points)

50.1 -70.0 pkt
70.1 -90.0 pkt
90.1 -100 pkt

Programme content

- 1. Surface phenomena in a fluid/fluid and fluid/solid system (qualitative and quantitative description of adsorption; adsorption isotherms; equilibrium and dynamics of the adsorption process)
- 2. Basic definitions and concepts of chemical catalysis: catalyst, its activity, selectivity and life span. Catalysts in homo- and heterogeneous catalysis. Enzymatic catalysis.

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

- 3. Heterogeneous catalysis (porous materials, characteristics and a role of heterogeneous catalyst components; support types; methods of applying the active substance; active centers; deactivation of the catalyst; heterogeneous catalysis steps; zeolites).
- 4. Mechanisms of surface reaction (Langmuir-Hinshelwood mechanism, Rideal mechanism).
- 5. Homogeneous catalysis (characteristics of catalysts in homogeneous catalysis and types of reactions in homogeneous catalysis; general and specific acid catalysis; general and specific basic catalysis; organometallic compounds).
- 6. Phase-transfer catalysis
- 7. Sorption and catalytic processes in environmental protection and tribology.
- 8. Kinetics of sorption processes.
- 9. Characteristics of selected catalytic industrial processes:
- a) crude oil processing (catalytic cracking, hydrocracking, catalytic reforming),
- b) oxidation of unsaturated hydrocarbons in the gas phase,
- c) catalytic flue gas treatment,
- d) photocatalysis and photoredox catalysis,
- e) industrial biocatalysis,
- e) organometallic compounds in industrial catalysis,
- f) catalytic processes/technologies developed in Poland.
- 10. Selected aspects of electrocatalysis.

Teaching methods

Lecture: multimedia presentation illustrated with examples shown on a blackboard.
