Prerequisites

Knowledge: The student has a basic knowledge of transport systems and processes; gained knowledge of various modes of transport

Skills: The student is able to analyze and evaluate transport processes; understands the phenomena occurring in them and is able to interpret them

Social competencies: understanding the need to acquire the transferred knowledge, is aware of the responsibility for their work

Course objective

To acquaint students with the specificity of transport of special goods, processes and phenomena in it

appearing; presentation of the current regulations, rules and standards for the functioning of the transport of special goods in the world.

Course-related learning outcomes

Knowledge

Has ordered and theoretically founded general knowledge related to key issues in the field of transport engineering

Has knowledge of development trends and the most important new achievements of means of transport and other selected related scientific disciplines

Skills

Can use information and communication techniques used in the implementation of projects in the field of transport

Can - when formulating and solving engineering tasks - integrate knowledge from various areas of transport (and, if necessary, also knowledge from other scientific disciplines) and apply a system approach, also taking into account non-technical aspects

Social competences

Understands the importance of using the latest knowledge in the field of transport engineering in solving research and practical problems

Is aware of the need to develop professional achievements and adhere to the rules of professional ethics

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Completion of the course, final exam

Programme content

Preparation of special loads for road transport, safety of transport of special loads, legal regulations in the transport of special loads, means of transporting special loads, trailers and semi-trailers for transporting non-standard loads, legal regulations regarding the transport of animals, organization of animal transport, loading and unloading devices (reloading, special cargo securing)

Teaching methods

Lecture with a multimedia presentation, Laboratories - problem methods (case study, situational method, method of expert tables)
