Wydział Inżynierii Lądowej i Transportu

ul. Piotrowo 3, 60-965 Poznań

Prerequisites

Knowledge in the field of subjects realized within the field of study.

Course objective

Practical use of the knowledge gained in the process of previous education and development of the ability to independently solve problems in the field of study.

Course-related learning outcomes

Knowledge

The student has a basic knowledge of patents, the copyright and related rights act and the act on the protection of personal data and technology transfer, in particular with regard to transport solutions

Skills

The student is able to prepare and present, in Polish and English, a well-documented study of problems in the field of transport engineering, including oral presentations.

Social competences

The student correctly identifies and solves dilemmas related to the profession of a transport engineer

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Assessment of the study presented by the student and assessment of independence and creativity during the work.

Programme content

Implementation of independent works in the field of: road vehicle construction, organization and management of technical facilities, maintenance and repair technology, non-destructive testing, traffic modeling and simulation, quality engineering, resource optimization in road transport, vehicle diagnostics.

Teaching methods

Periodic consultations with the supervisor in order to assess the progress of the student's work and help in further work, as well as to indicate literature, people, institutions that can provide information and help in the field of work carried out by the student.

Bibliography

Basic

related to the problem being solved
