Prerequisites

Knowledge of issues related to the realized diploma topic. Is able to apply the scientific method in solving problems, carrying out experiments and inference. He knows the limits of his own knowledge and skills; can formulate questions precisely, understand the need for further education

Course objective

Deepening the knowledge and skills about organization and conducting scientific and technical works as well as presenting the results of these works.

Course-related learning outcomes

Knowledge

The student knows the basic techniques, methods and tools used in the process of solving tasks in the field of transport, mainly of an engineering nature engineering

The student has a basic knowledge of patents, the copyright and related rights act and the act on the protection of personal data and technology transfer, in particular with regard to transport solutions

Skills

The student is able to prepare and present, in Polish and English, a well-documented study of problems in the field of transport engineering, including oral presentations.

The student is able to organize, cooperate and work in a group, assuming various roles in it, and is able to properly define priorities for the implementation of a task set by himself or others

The student is able to plan and implement the process of own life long learning and knows the possibilities of further education (second and third degree studies, postgraduate studies, courses and exams conducted by universities, companies and professional organizations)

Social competences

The student is aware of the social role of a technical university graduate, in particular, he/she understands the need to formulate and transfer to the society, in an appropriate style, information and opinions on engineering activities, technological achievements, as well as the achievements and traditions of the transport engineer profession

The student correctly identifies and solves dilemmas related to the profession of a transport engineer

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Thesis - progress of work presented in each class

Programme content

General part: types of qualifying work, including thesis and rules for their implementation, requirements for thesis. Formulation of technical problem and theses of work, literature study, methodical part of work, presentation of research results, development of insights and conclusions. Principles of editing the work, editing support, developing graphic elements, preparing work for printing and duplication.

Specialist part: presentation of theses carried out by the authors and discuss them.

Teaching methods

Thesis - progress of work presented by students during each class
