Lecturers

Responsible for the course/lecturer:

dr inż. Arkadiusz Hulewicz

email: arkadiusz.hulewicz@put.poznan.pl

tel. 61 665 2546

Faculty of Control, Robotics and Electrical Engineering

ul. Piotrowo 3A, 60-965 Poznań

Responsible for the course/lecturer:

Dr inż. Przemysław Otomański

email: przemyslaw.otomanski@put.poznan.pl

tel. 61 665 2599

Faculty of Control, Robotics and Electrical Engineering

ul. Piotrowo 3A, 60-965 Poznań

Prerequisites

Basic knowledge of mathematics, physics, electrotechnics, electronics and metrology. Ability to realize the efficient self-education in the area related to the chosen field of studies. Awareness of the necessity of broadening of the competences in the field of electrical engineering and willingness to cooperate in a team.

Course objective

Knowledge of measurement methodology, attributes of modern measuring devices and equipment, principles of using analog and digital measuring devices, and evaluation of measurement results

Course-related learning outcomes

Knowledge

1. Ability to describe principles of methodology of electrical quantities measurements made with basic analog and digital devices.
2. Ability to explain a principle of the proper choice of elements of a simple set for measurements of electrical quantities

Skills

1. Ability to use the basic electrical measuring devices in accordance with operating manuals and to explain appropriate operation of the simple measuring systems.
2. Ability to made a simple measuring task and evaluate the inaccuracy of the obtained results

Social competences

1. Ability to think and act in the enterprising way in the area of measuring engineering.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Laboratory exercises: continuous estimating with the tests, awarding the skill increase, the evaluation of knowledge and skills connected with the measuring tasks and prepared reports

Getting additional points for the activity during classes, in particular: the efficiency of the use of acquired knowledge to solve a given problem; skill of the co-operation within the team practically realizing a given detailed task in the laboratory; remarks connected with the improvement of didactic materials; the aesthetic qualities of the reports

Programme content

Methods of education are orientated to students to motivate them to participate actively in education process by discussion and reports. Planning and accomplishment of measuring tasks. Electromechanical and electronic measuring devices. Analog and digital measurements of electrical quantities. Measurements of alternating voltage. Testing of a voltmeter equipped with the double-integration A/D converter. Application of analog oscilloscope in measurements. Examples of measurements of electrical quantities. Interpretation of measurement results and estimation of their inaccuracy

Teaching methods

Lectures: Multimedia presentations expanded by examples shown on a board.

Laboratory: Multimedia presentations expanded by examples shown on a board and realization of experiments
