

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Product ergonomics and industrial design

Course

Field of study

Year/Semester

Safety Engineering

II/3

Area of study (specialization)

Profile of study

Ergonomics and Work Safety

general academic

Level of study

Course offered in

Second-cycle studies

polish

Form of study

Requirements

part-time

elective

Number of hours

Lecture

Laboratory classes

Other (e.g. online)

10

10

Tutorials

Projects/seminars

-

10

Number of credit points

3

Lecturers

Responsible for the course/lecturer:

Responsible for the course/lecturer:

dr hab. Eng. Marcin Butlewski

Department of Ergonomics Applications

Phone: 605 883 000

Room: 361 WAWIZ

marcin.butlewski@put.poznan.pl

Prerequisites

The student has basic knowledge in the field of ergonomics

Course objective

The aim of the course is to teach students how to use methods of ergonomic product designing and industrial design

Course-related learning outcomes

Knowledge

knows the issues of ergonomics, macroergonomics and occupational safety as well as design knows the issues of ergonomics, macroergonomics and occupational safety as well as design methodologies including safety principles in product design

knows issues related to the area of ergonomics and occupational safety, in particular regarding the safety and ergonomics of products

knows design issues in relation to products and manufacturing processes

Skills

is able to use research, analytical, simulation and experimental methods to formulate and solve engineering tasks, also using information and communication methods and tools in product design

is able to critically analyze the functioning and evaluate - in conjunction with Safety Engineering existing technical solutions, in particular machinery, equipment, objects and various types of artifacts

can plan and carry out experiments, including computer measurements and simulations, interpret obtained results and draw conclusions about products

is able to identify changes in requirements, standards, regulations, technical progress and the reality of the labor market, and on their basis determine the need to supplement own and other knowledge in order to produce products at a given level of ergonomic quality

Social competences

is aware of the recognition of cause-and-effect relationships in achieving the set goals and ranking the significance of alternative or competitive projective tasks

is aware of recognizing the importance of knowledge in solving problems in the field of security engineering and continuous improvement while creating new solutions

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Formative assessment - current assessment of tasks assigned, As part of the project, assessment of individual stages.

Assessment summarizing the ability to apply methods in practice

Programme content

The concept of product ergonomics and ergonomics. Product evaluation criteria. Ergonomic design. Standards in ergonomic design - practical use of ISO 6385 and standards from the group 1005. Application of tools in the area of ergonomic product design, requirements analysis - Systemic Requirement Analysis, morphological analysis - Relationships, the house of quality for the purposes of ergonomic product, ergonomic TRIZ. The concept of usability and features that affect it. Designing for individual groups of recipients. Universal, immersive (inclusive) design. Gerontechnics - geroneergonomics. Pattern design and shots used in it. Persuasive design. Entographic design.

Teaching methods

Classical problem method, Case study method

Breakdown of average student's workload

	Hours	ECTS
Total workload	90	3,0
Classes requiring direct contact with the teacher	30	1,5
Student's own work (literature studies, preparation for classes/tutorials, preparation for tests/exam, project preparation) ¹	60	1,5

¹ delete or add other activities as appropriate
