### Prerequisites

Student defines and describes the basic concepts and principles in the field of quality management, the foundations of organization and management. The student is able to verify and evaluate phenomena occurring during the implementation of processes in enterprises and has the ability to interpret and describe the observations and observations. The student is aware of the importance of quality for its recipients and creators of its level. The student is aware of the need to shape products and processes, taking into account quality, normative and legal requirements.

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

## **Course objective**

Presenting the essence of using modern methods and tools in quality management. Acquisition by students of the practical ability to apply quality management methods and tools in processes, ventures, products and systems.

## **Course-related learning outcomes**

#### Knowledge

The student knows how to use quality management methods and tools to model information processes and decision-making processes (P7S\_WG\_02).

The student knows how to model processes and phenomena related to quality management in organizations using mathematical statistics methods and tools (P7S\_WG\_03).

The student fluently defines concepts related to quality management as well as methods and tools for quality management (P7S\_WG\_04).

The student very good knows data acquisition methods used in quality management (P7S\_WG\_07).

### Skills

The student is able to carry out cause-and-effect analysis for processes and phenomena occurring in organizations using appropriately selected methods and tools of quality management (P7S\_UW\_01, P7S\_UW\_07).

The student is able to apply advanced quality management methods and tools to model phenomena occurring in processes, products and management systems (P7S\_UW\_02).

The student is able to correctly interpret the results and draw conclusions from the methods and quality management tools used (P7S\_UW\_06).

The student is able to critically analyze the results of the application of quality methods and tools and then propose a concept for improving the studied phenomena taking into account technical, organizational and economic aspects (P7S\_UW\_09).

### Social competences

The student is aware that quality management requires an interdisciplinary approach and teamwork (P7S\_KK\_01)

The student knows how to use cause-and-effect analysis and is able to use it and give it rank in achieving the objectives of the subject (P7S\_KK\_02).

### Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows: Lecture:

Formative assessment: answers to questions regarding the content of previous lectures

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

Summative assessment: The pass a test consisting of 10-20 mixed questions (test and open), scored on a two-point scale of 0, 1. Passing threshold: 55% of the points.

Tutorials:

Formative assessment: assessment of the current progress of the implementation of tasks, for each task the student receives a partial assessment.

Summative assessment: arithmetic average of partial grades obtained for individual tasks.

Laboratory classes:

Formative assessment: assessment of the current progress of the implementation of tasks, for each task the student receives a partial assessment.

Summative assessment: arithmetic average of partial grades obtained for individual tasks.

### **Programme content**

Lecture: The essence of perfecting in organizations. Kaizen - essence and tools. Clasification of quality management methods and tools. Modern methods and tools of quality management and application of them.

Tutorials: Developing the quality function, applying the QFD method in products, services and processes. Failure mode and effects analysis, different variations of the FMEA method. Practical applications of the FMEA method.

Laboratory classes: Application of the R&R method to analyze selected phenomena in organizations. Measuring systems. Analysis of measuring systems for unmeasurable features. Kappa method, problems in determining and interpreting Cohen's Kappa coefficient.

### **Teaching methods**

Informative lecture, problem lecture, seminar lecture, talk, discussion in the form of a snowball, project method, simulation method, workshop method, demonstration method.

#### Breakdown of average student's workload

	Hours	ECTS
Total workload	60	2,0
Classes requiring direct contact with the teacher	30	1,0
Student's own work (literature studies, preparation for laboratory	30	1,0
classes, preparation for tutorials, preparation for tests). <sup>1</sup>		

<sup>&</sup>lt;sup>1</sup> delete or add other activities as appropriate
