

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Bonding materials

Course

Field of study

Construction and operation of means of transport

Area of study (specialization)

-

Level of study

First-cycle studies

Form of study

part-time

Year/Semester

2/4

Profile of study

general academic

Course offered in

Polish

Requirements

compulsory

Number of hours

Lecture

9

Laboratory classes

9

Other (e.g. online)

0

Tutorials

0

Projects/seminars

0

Number of credit points

2

Lecturers

Responsible for the course/lecturer:

dr hab. inż. Marian Jóska, prof. nadzw. PP

email: marian.josko@put.poznan.pl

tel. 616652247

Faculty of Civil and Transport Engineering

ul Piotrowo 3, 60-965 Poznań

Responsible for the course/lecturer:

dr inż. Grzegorz Kinal email:

grzegorz.kinal@put.poznan.pl

tel. 616475946

Faculty of Civil and Transport Engineeringul

ul. Piotrowo 3, 60-965 Poznań

Prerequisites

Knowledge: Basic knowledge of physics, chemistry, materials science, thermo-chemical treatment of metals and strength of materials and structures.

Skills: Ability to use scientific and technical literature in Polish and English, the relevant standards and operating instructions for electrical and electronic devices.

Social competences: Willingness to critically evaluate the knowledge acquired so far and to supplement this knowledge and practical skills, as well as to solve cognitive and practical problems by consulting experts in bonding.

Course objective

The aim of the course is to familiarize students with the methods of bonding metal and non-metal materials and to develop the skills of their application in manufacturing or operational practice.

Course-related learning outcomes

Knowledge

1. Has knowledge of physics, including the basics of classical mechanics, optics, electricity and magnetism, solid state physics, quantum and nuclear physics, necessary to understand specialist lectures in the field of construction materials theory and materials science, theory of machines and mechanisms, theory of electric drives and mechatronic systems.
2. Has a basic, ordered knowledge of metal materials used in machine construction, such as alloys of iron, aluminum, copper, etc. used in machine construction, and in particular about their structure, properties, methods of production, heat and thermo-chemical treatment and the impact of machining plastic for their strength.
3. Has a basic, structured knowledge of non-metallic and composite materials used in the construction and operation of machines, mainly ceramic materials, synthetic materials, non-metallic natural materials (wood, glass, stone) and fuels, lubricants, technical gases, refrigerants, etc.

Skills

1. Can obtain information from literature, the Internet, databases and other sources. Can integrate the obtained information, interpret and draw conclusions from it, and create and justify opinions
2. Is able to properly use modern equipment for measuring the main physical quantities used in machine research and production control.
3. Can design the technology of making a simple machine element and the technology of assembling and disassembling the machine.

Social competences

1. Is ready to critically assess the knowledge and content received
2. Is ready to recognize the importance of knowledge in solving cognitive and practical problems and to consult experts in the event of difficulties in solving the problem on its own

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Written exam containing questions about the methods of joining materials, formulated by the lecturers in this subject;

- Passing laboratory exercises on the basis of a set of positively assessed reports from individual exercises, supported by questions and presence analysis.

Programme content

1. Introduction to bonding materials - Basics and history of bonding. The essence of bonding. Types and mechanisms of bonding.
2. Welding - The essence of the connection. Divisions, types and classification of welds. Welding equipment and materials. Structure of the weld and joined materials after welding and their properties.
3. Gas welding - The essence, mechanism and technology of gas welding. Welding and welding of plastics.
4. Arc welding - The essence and types of arc and hybrid welding. Welding MIG / MAG / TIG / GTAW. Arc welding equipment and materials.
5. Welding - The essence, types and parameters of welding. Welding equipment. Types of welded joints.
6. Soldering and braze welding - The essence, types and parameters of soldering. Soldering materials and equipment. Braze welding technology. Braze welding parameters.
7. Gluing - The essence of gluing. Types and functions of adhesive joints. Types of adhesives and methods of their application. Assessment of the quality of adhesive joints.
8. Assessment of the bonding quality of materials. Defects of joint structures and joined materials after bonding (especially after welding and fusing) and their properties. Destructive and non-destructive inspection of bonded joints, especially welded and welded joints. Standards

Teaching methods

Lecture with multimedia presentation. Laboratory classes.

Bibliography

Basic

1. Sobieszczański J.: Spajanie. Oficyna Wydawnicza Politechniki Warszawskiej, Warszawa, 2004.
2. Kolasa A.: Spajanie materiałów we współczesnej technice. Oficyna Wydawnicza Politechniki Warszawskiej, Warszawa, 2010.
3. Tasak E.: Obróbka ubytkowa i spajanie. Uczelniane Wydawnictwo Naukowo-Dydaktyczne AGH, Kraków, 2001.

Additional

1. Mirski Z.: Spajanie węglików spiekanych ze stalą. Wydawnictwo Politechniki Wrocławskiej, Wrocław, 2011.
2. Spajanie metali i tworzyw w praktyce. Czasopismo - kwartalnik, numery od 2004 r.

Breakdown of average student's workload

	Hours	ECTS
Total workload	60	2,0
Classes requiring direct contact with the teacher	30	1,0
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation) ¹	30	1,0

¹ delete or add other activities as appropriate
