ul. Jacka Rychlewskiego 2, 60-965 Poznań

Responsible for the course/lecturer:

Prerequisites

Basic knowledge of technique (sem.1)

Course objective

To familiarize students with the basic principles of construction, operation and operation of general purpose machines and equipment, which are equipped in an industrial plant

Course-related learning outcomes

Knowledge

P6S_WG_01 knows the basic issues of construction, technology and techniques related to logistics

P6S_WG_02 knows the basic issues of mechanics, construction and operation of machines related to logistics

Skills

P6S_UW_03 is able to apply the right experimental and measuring techniques to solve the problem within the studied subject, including computer simulation within logistics and its specific issues, and supply chain management

P6S_UU_01 is able to identify changes in requirements, standards, regulations, technical progress and reality of the labor market, and based on them determine the needs of supplementing knowledge

Social competences

P6S_KO_02 is aware of initiating activities related to the formulation and transfer of information and cooperation in society in the field of logistics

P6S_KR_02 is aware of cooperation and work in a group on solving problems within logistics and supply chain management

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Formative assessment:

in lectures: on the basis of answers to questions about material modified in previous lectures.

Summary summary:

lecture - written test on the basis of previously prepared questionnaire

Programme content

The program of the subject covers the following issues: the genesis of the science of machine construction and operation, Phases of the existence of a technical object, theories of operation. Rules for the construction and operation of equipment. Use of devices. Elements of tribology, friction, wear, surface layer lubrication, Basic issues related to reliability, quality and durability. Machine diagnostics. Types of diagnostic tests. Operation of machinery and equipment related to logistics, Operation of means of transport and storage equipment.
