

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Durability and reliability of vehicles

		Course
Field of study		Year/Semester
Mechanical and Automotive Engineering		2/3
Area of study (specialization)		Profile of study
Motor Vehicles		general academic
Level of study		Course offered in
Second-cycle studies		polish
Form of study		Requirements
part-time		compulsory

			Number of
hours			
Lecture	Laboratory classes		Other (e.g. online)
9			
Tutorials	Projects/seminars		
9			
Number of credit points			
2			

		Lecturers
Responsible for the course/lecturer:		Responsible for the course/lecturer:
dr hab. inż. Michał Libera		
e-mail: michal.libera@put.poznan.pl		
tel. +4861 665-2223		
Wydział Inżynierii Lądowej i Transportu		
ul. Piotrowo 3, 60-965 Poznań		

Prerequisites

The student has a basic knowledge of the construction of cars and the principles of operation of their components as well as the basics of reliability.

The student is able to analyze and synthesize information, draw conclusions, formulate and justify opinions.

Course objective

Developing the ability to formulate and solve problems related to the reliability of vehicles at the stage of their design, manufacture and operation.

Course-related learning outcomes

Knowledge

Has extensive knowledge of the processes taking place in the surface layer of machine structural elements and surface engineering methods.

Has knowledge of the principles of safety and ergonomics in the design and operation of machines and the threats that machines pose to the natural environment.

Has extended knowledge of the life cycle of machines, the principles of operation of working machines and destructive processes occurring during operation, such as tribological wear, corrosion, surface fatigue and volumetric aging of the material.

Skills

He can estimate the potential threats to the environment and people from the designed working machine and vehicle from a selected group.

Can plan and carry out experimental research of specific processes taking place in machines and routine tests of a working machine or a vehicle from a selected group of machines.

He can design the technology of exploitation of a selected machine with a high degree of complexity.

Social competences

He is ready to critically assess his knowledge and received content.

Is ready to recognize the importance of knowledge in solving cognitive and practical problems and to consult experts in case of difficulties in solving the problem on its own.

It is ready to fulfill social obligations, inspire and organize activities for the benefit of the social environment.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Project in the field of vehicle reliability modeling. Final test

Programme content

Reliability terminology. Airworthiness and unfitness condition, damage. Service life until failure and between failures. Limit state, durability. State assessment criteria.

Reliability in models used in the design of motor vehicles. Planning of research allowing for the development of reliability at the design stage

Reliability and technological quality. The dispersion of the properties of the manufactured elements.

Influence of operating conditions on the reliability of vehicles. Influence of servicing strategy on vehicle reliability. Forms of destroying elements of motor vehicles. Typical courses of changes in technical condition. Statistical description of changes in technical condition. Analysis of operational data about

mileage to failure and between failures. Analysis of the types, causes and effects of the vehicle functional failure and estimation of the risks resulting from its occurrence.

Empirical characteristics and models of vehicle reliability. Analysis of durability and reliability of selected vehicles. Identification of weak links in currently manufactured motor vehicles.

Teaching methods

Informative and problematic lecture with a multimedia presentation. Exercises with didactic discussion.

Bibliography

Basic

1. Hebda M.: Eksploatacja samochodów. Wydawnictwo Instytutu Technologii Eksploatacji, Radom 2005
2. Gronowicz J.: Eksploatacja techniczna i utrzymanie samochodów. Wydawnictwo Uczelniane Politechniki Szczecińskiej, Szczecin 1997
3. Smalko Z.: Podstawy eksploatacji technicznej pojazdów. Warszawa, Wydawnictwo Politechniki Warszawskiej, 1987
4. Niziński S.: Diagnostyka samochodów osobowych i ciężarowych, Dom wydawniczy Bellona, Warszawa 1999r
5. Klyatis Lev M.: Accelerated reliability and durability testing technology

Additional

3. O'Connor P.D.T., Newton D., Bromley R.: Practical Reliability Engineering, John Willey and Sons, LTD, 2001

Breakdown of average student's workload

	Hours	ECTS
Total workload	30	2,0
Classes requiring direct contact with the teacher	18	1,0
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation) ¹	12	1,0

¹ delete or add other activities as appropriate
