### EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

The student knows the basics of physics and chemistry and the basics of thermodynamics and fluid mechanics. The student speaks terminology in mechanics, thermodynamics, physics and chemistry. Corrects description of observed phenomena, analysis of received results and drawing conclusions. The student works in an interdisciplinary team. Ability to lead the team and expand team knowledge.

# **Course objective**

Demonstration of dependencies describing physical and chemical properties of gases.

# **Course-related learning outcomes**

# Knowledge

The student has extended and in-depth knowledge of physics useful for formulating and solving selected technical tasks, in particular for correct modeling of real problems

The student has knowledge of ethical codes regarding transport engineering, is aware of the dangers related to environmental protection and understands the specificity of mission-critical systems

#### Skills

The student is able to obtain information from various sources, including literature and databases (both in Polish and in English), integrate it properly, interpret it and critically evaluate it, draw conclusions, and comprehensively justify his/her opinion.

The student can properly use information and communication techniques, applicable at various stages of the implementation of transport projects

#### Social competences

The student understands that in technology, knowledge and skills very quickly become obsolete

# Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture - written exam. Obtaining credit from a minimum of 51% of the points possible to get. There is a possibility of an oral question to raise the grade.

Laboratories - positive evaluation of reports on exercises performed

#### **Programme content**

Characteristics of the liquid state. Phase equilibria in multicomponent systems. Osmotic phenomena in two-component systems. Liquid viscosity, pressure and temperature dependence. Osmosis, dialysis. Donnan diaphragm equilibrium. Diffusion. Kinetics and mechanism of phase transitions.

### **Teaching methods**

Informative lecture (conventional) (information transfer in a systematic way)

### **Bibliography**
