

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Optoelectronic and photonic elements and technology

Course

Field of study

Electronics and Telecommunications

Area of study (specialization)

Level of study

First-cycle studies

Form of study

full-time

Year/Semester

IV/VII

Profile of study

general academic

Course offered in

English

Requirements

elective

Number of hours

Lecture

15

Laboratory classes

Other (e.g. online)

Tutorials

15

Projects/seminars

Number of credit points

4

Lecturers

Responsible for the course/lecturer:

Dr. Jan Lamperski

Responsible for the course/lecturer:

e-mail: jan.lamperski@put.poznan.pl

Prerequisites

Basic knowledge of mathematics, EM field theory, optics and optocommunications.

Course objective

In-depth knowledge and understanding of the design, operation and features of various optical devices used in optical transmission systems and equipment for the processing of optical signals.

Course-related learning outcomes

Knowledge

The student has knowledge of the physical behavior of passive and active optical components

Has knowledge of the features and possible applications of optical and optoelectronic materials

Understands physical principles of operation and construction of the selected optical elements and optoelectronic devices (directional couplers, modulators, photodiodes, lasers, optical amplifiers, optical filters, acousto-optical cell)

Understands the applications in which advanced photonics devices and sub-modules are used

Skills

Can define requirements and select appropriate optical elements for the specific application

Can calculate the basic parameters of optoelectronic components

Has design skills to define problems, identifies constraints propose solutions for specific applications to fulfill performance and required specification

Social competences

Has awareness of the necessity of professional approach to solving of technical problems

Understands the role of photonics in next-generation systems for signal processing and transmission

3. Is aware of the advantages of optical technology and necessity of transition from electronics to photonics

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Assessment of lecture material - written and/or oral form of 2-3 selected problems. Assessment of laboratory projects - presentation of lab group results.

Programme content

Duality of light: rays, waves, electromagnetism, quanta. Polarization of light. Electro- and acousto-optic effects. Nonlinear optics. Fundamentals of quantum mechanics.

Selected components of integrated optics: planar waveguides, directional couplers, EAM (Franz-Keldysh), MZM, AOM.

Photonic crystal fibers. PCF supercontinuum.

Fabry-Perot resonator.

Optoelectronic semiconductor materials: electrical carriers, energy band-gap structure, direct indirect semiconductors.

Interaction of radiation with atoms.

Basic principles of light detection and emission in semiconductors. LED electrical and optical features. Semiconductor optical amplifiers. Properties of F-P, DFB, DBR semiconductor lasers. Mode locked lasers.

Modulators for advanced modulation formats: PSK, QPSK, DQPSK, PoSK. Coherent detection. Detection of multilevel optical signals. SOA: Wavelength conversion and regeneration. Nonlinear based all optical signal processing and regeneration (NOM, SL, SPM-MZI, XPM-MZI). Optical switching: MEMS, OE, LC, CI technology. Optical control loops: OIL, OPLL. Optical computers.

Optical comb generation. Optical frequency standards.

Teaching methods

Lectures are conducted in the multimedia form, problem oriented with students interaction.

Laboratoies focus on numerical exercises concerning specific optical effects, and simultaneously students work in groups on the assigned more complex problems concerning photonic devices.

Bibliography

Basic

Breakdown of average student's workload

	Hours	ECTS
Total workload	100	3,0
Classes requiring direct contact with the teacher	40	2,0
Student's own work (literature studies, preparation for laboratory, preparation for tests, project preparation) ¹	60	2,0

¹ delete or add other activities as appropriate
