respect to the following language skills: listening, reading, writing, speaking. To improve the student's ability to function effectively on the international job market and in everyday life.

Course-related learning outcomes

Knowledge

The student has acquired field-specific vocabulary related to the following issues: models of atom, electrical charge, static electricity, direct and alternating current, basic laws and electrical quantities, components of a circuit and their functions, electrical materials, meters, maths.

Skills

The student is able to use English to provide definitions of terms, and explain phenomena and processes referred to in the programme; express basic mathematical formulas; interpret source materials.

Social competences

The student is able to communicate effectively in general and field-specific area, and communicate in English in public.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Formative assessment: regular assessment of in-class performance and home assignments, quizzes. Summative assessment: two 90 minute-long written quizzes featuring a battery of tests. Successful completion of home assignments and a 60% score on both quizzes are required to obtain a pass.

Programme content

Mathematical terms. General topics: lifestyles, travelling, work. Field-specific topics: basic notions in static and current electricity, Coulomb's law, Ohm's law, Kirchhoff's laws. Circuit components. Electrical materials. Meters.

Teaching methods

Classroom activities guided by the communicative approach.
