

## COURSE DESCRIPTION CARD - SYLLABUS

Course name

Materials engineering

### Course

Field of study

Electrical Engineering

Area of study (specialization)

-

Level of study

First-cycle studies

Form of study

full-time

Year/Semester

1/1

Profile of study

general academic

Course offered in

Polisch

Requirements

compulsory

### Number of hours

Lecture

15

Laboratory classes

0

Other (e.g. online)

0

Tutorials

0

Projects/seminars

0

### Number of credit points

1

### Lecturers

Responsible for the course/lecturer:

Dr hab. inż. Jarosław Gielniak

email: jaroslaw.gielniak@put.poznan.pl

tel. 61 665 2024

Faculty of Environmental Engineering and

Energy

Piotrowo 5, 60-965 Poznań

Responsible for the course/lecturer:

### Prerequisites

Mathematics, chemistry and physics fundamentals. Students can assemble the measurement system, can perform measurements of basic physical quantities. Is able to develop test results and work in a group. Understands the importance of teamwork

### Course objective

Knowledge of basic materials used in electrical engineering, phenomena occurring in them and characterized them properties. Learning new techniques and research methods.

### Course-related learning outcomes

Knowledge

1. The student has structured and theoretically founded knowledge of the structure and operation of electrical equipment, is knowledgeable about the exploitation of technical systems

2. The student has a basic knowledge of the properties and applications of materials used in electrical engineering
3. The student has knowledge of the physical phenomena occurring in insulating, conductive, semi-conductive and magnetic materials

#### Skills

1. Students can compile the research documentation and discuss obtained research results
2. The student can choose the right method and use the measuring equipment to determine the basic characteristics specific to tested materials

#### Social competences

1. The student understands the aspects and consequences of the use of materials, including the impact on the environment, and the related responsibility for decisions
2. The student is aware of their own responsibility for their work and a willingness to comply with the principles of teamwork and shared responsibility for the implementation of tasks

#### Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Assessment of knowledge and skills on the final test (multiple choice test consisting of 15 tasks, 15 points can be obtained - passing the exam from 7.5 points)

#### Programme content

Insulating materials - gases (air, nitrogen, SF<sub>6</sub>, hydrogen, freon, mixtures), liquids (vegetable, mineral and synthetic oils), new electro-insulating liquids, in particular biodegradable synthetic and natural liquids, their mixtures and nanofluids based on these liquids fibrous materials (cellulose, glass, carbon and fibres), elastomers (natural and synthetic rubbers), thermoplastics, hardening plastics, inorganic dielectric (mica, glass, ceramics) - conductivity in dielectrics. Magnetic materials - theory of magnetism, ferromagnetic, paramagnetic, ferri- and antiferrimagnetic materials, materials magnetically soft and hard. Conductive materials - theory of conduction, scattering centres, conductive and resistive materials. Superconductors - the theory of superconductivity, classic, mixed and high temperature superconductors, cryogenics. Semiconductors - types, applications. Methods for testing the mechanical, electrical and chemical properties of materials - hardness test, impact resistance, tensile strength, electric polarization, volume and surface resistivity, complex permittivity, humidity, acidity, polymerisation degree.

#### Teaching methods

lectures - lecture with multimedia presentation (including: drawings, pictures) supplemented with examples given on the board and presentation of samples of discussed materials. Theory presented in close connection with practice

#### Bibliography

Basic

**Breakdown of average student's workload**

	Hours	ECTS
Total workload	30	1,0
Classes requiring direct contact with the teacher	16	1,0
Student's own work (literature studies, preparation for test) <sup>1</sup>	14	1,0

<sup>1</sup> delete or add other activities as appropriate
