

## COURSE DESCRIPTION CARD - SYLLABUS

Course name

Instrumental Analysis

### Course

Field of study	Year/Semester
Pharmaceutical Engineering	2/4
Area of study (specialization)	Profile of study
-	general academic
Level of study	Course offered in
First-cycle studies	polish
Form of study	Requirements
full-time	compulsory

### Number of hours

Lecture	Laboratory classes	Other (e.g. online)
30	15	0
Tutorials	Projects/seminars	
0	0	

### Number of credit points

3

### Lecturers

Responsible for the course/lecturer:

dr hab. inż. Mariusz Ślachcinski

email: Mariusz.Slachcinski@put.poznan.pl

tel. 616652314

Wydział Technologii Chemicznej

ul. Berdychowo 4 60-965 Poznań

Responsible for the course/lecturer:

dr hab. inż. Agnieszka Zgoła-Grzeskowiak, prof.

PP

email: agnieszka.zgola-grzeskowiak@put.poznan.pl

tel. 616653345

Wydział Technologii Chemicznej

ul. Berdychowo 4 60-965 Poznań

### Prerequisites

Basic knowledge of inorganic and analytical chemistry, apparatus used in the chemical laboratory, mathematical tools used in the chemical calculations.

Usage a of basic chemical apparatus and volumetric glassware.

### Course objective

To familiarize students with instrumental techniques (apparatus, physicochemical phenomena, quantitative and qualitative analysis). Presentation of instrumental techniques: absorption atomic

spectrometry (FAAS, ET AAS), optical emission spectrometry (OES) inductive coupled plasma (ICP), microwave induced plasma (MIP), direct current plasma (DCP), UV-VIS spectrophotometry, gas and liquid chromatography, electroanalytical techniques, mass spectrometry). Possibility of using these techniques in the pharmaceutical and medical analysis.

### Course-related learning outcomes

#### Knowledge

1. Student has the necessary knowledge in the field of chemistry for the understanding of phenomena and processes occurring during analysis, K\_W4
2. Student has theoretically founded general knowledge in the field of analytical chemistry and instrumental analysis K\_W04
3. Knows classical and instrumental methods used in assessing the quality of substances for pharmaceutical purposes and in quantitative analysis in medicinal products K\_W7

#### Skills

1. Student can obtain the necessary information from the literature to conduct the determination of an analyte in the real sample. K\_U01
2. Student is able to perform basic chemical analysis, interprets the results of analyzes and draw appropriate conclusions K\_U2, K\_U03, K\_U5, K\_U10

#### Social competences

1. Students can understand the need for self-education and raising their competences in the field of instrumental analysis, K\_K1
2. Student is able to work both individually and in team during the laboratory work, K\_K2

### Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Knowledge acquired during the lectures is verified during the written exam, carried out in a stationary or remote mode via e-Kursy platform, containing 10 questions with different scores depending on the degree of difficulty. Passing threshold: 55% of points.

### Programme content

Theoretical basis of physicochemical phenomena leading to the analytical signal measurement, signal measurement methods, analytical characteristics of the method. Instrumental techniques: atomic absorption and emission spectrometry, UV-VIS spectrophotometry, electrochemical methods, gas and liquid chromatography, mass spectrometry, continuous and flow injection analysis.

### Teaching methods

1. Lecture: multimedia presentation supported with examples presented on the blackboard.

2. Laboratory classes: analyte determinations using analytical apparatus in accordance with the instructor's directions.

## Bibliography

### Basic

1. D.A. Skoog, D.M. West, F.J. Holler, S.R. Crouch, Podstawy Chemii Analitycznej T. 1 i 2, PWN, Warszawa, (1) 2006, (2) 2007
2. J. Minczewski, Z. Marczenko, Chemia Analityczna. Analiza Instrumentalna T. 1-3, PWN, Warszawa, 1,2 (2007), 1(1985)
3. A. Cygański, Chemiczne metody analizy ilościowej, WNT Warszawa, 2019
4. A Cygański, Metody spektroskopowe w chemii analitycznej, WNT, Warszawa, 2020
5. Z. Witkiewicz, J. Kałużna-Czaplińska, Podstawy chromatografii i technik elektromigracyjnych, PWN, Warszawa, 2017
6. A Cygański, Metody elektroanalityczne, WNT, Warszawa, 1999
7. I. Baranowska (red.) Analiza śladowa – Zastosowania, Wydawnictwo MALAMUT, Warszawa, 2013
8. Chemiczna analiza środków leczniczych (Leki proste), skrypt z chemii leków, Uniwersytet Gdańskiego 2010
9. J. Namieśnik, P. Konieczka, B. Zygmunt, Ocena i kontrola jakości wyników analitycznych, WNT, 2014
10. A. Cygański, B. Ptaszyński, J. Krystek, Obliczenia w chemii analitycznej, WNT Warszawa, 2004
11. M. Wesołowski, K. Szefer, D. Zimna, Zbiór zadań z analizy chemicznej, WNT Warszawa, 2002

### Additional

1. Ślachciński, M., Modern chemical and photochemical vapor generators for use in optical emission and mass spectrometry, Journal of Analytical Atomic Spectrometry, 2019, 34(2), 257-273 1. W. Ufnalski, Równowagi jonowe, WNT Warszawa 2004
2. A. Hulanicki, Reakcje kwasów i zasad w chemii analitycznej, WN PWN Warszawa 2012
3. Z. Galus, Ćwiczenia rachunkowe z chemii analitycznej, WN PWN Warszawa 2020
4. J. Dojlido, J. Zerbe, Instrumentalne metody badania wody i ścieków, Arkady, Warszawa 1997

**Breakdown of average student's workload**

	Hours	ECTS
Total workload	90	3,0
Classes requiring direct contact with the teacher	50	1,7
Student's own work (literature studies, preparation for laboratory classes, preparation for tests/exam) <sup>1</sup>	40	1,3

<sup>1</sup> delete or add other activities as appropriate
