

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

# **COURSE DESCRIPTION CARD - SYLLABUS**

Course name		
Construction of jet units		
Course		
Field of study		Year/Semester
Aerospace Engineering		2/3
Area of study (specialization)		Profile of study
Aero engines and airframes		general academic
Level of study		Course offered in
First-cycle studies		polish
Form of study		Requirements
full-time		elective
Number of hours		
Lecture	Laboratory classes	Other (e.g. online)
15	0	-0
Tutorials	Projects/seminars

#### **Prerequisites**

Basic knowledge of technical drawing, mechanics, strength of materials and thermodynamics.

## **Course objective**

To familiarize students with issues related to the requirements, construction and operation of aircraft assemblies for turbine engines and examples of control systems implementation.

## **Course-related learning outcomes**

### Knowledge

1. has ordered, theoretically founded general knowledge covering key issues in the field of technical thermodynamics, i.e. the theory of thermodynamic transformations, heat flow, heat machines, materials science, construction of flow machines and the ability to make technical drawings.

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

2. has ordered, theoretically founded general knowledge covering key issues in the field of on-board systems, as well as on-board and ground-based electronic communication systems, in particular radiolacation systems and design solutions.

3. has a basic knowledge of the basic processes occurring in the life cycle of devices, objects and technical systems, as well as their technical description in the field of aviation engineering, in particular flow machinery, gas turbines and their exploitation

## Skills

1. knows how to use a language to the extent that it is possible to understand technical texts in the field of aviation (knowledge of technical terminology), in particular by using technical vocabulary in the field of powerplant construction.

2. is able to obtain information from literature, the Internet, databases and other sources. Is able to integrate obtained information, interpret and draw conclusions from them, in particular obtain information on the construction of DTSO aircraft engines.

3. is able to carry out elementary technical calculations in the field of fluid mechanics and thermodynamics, such as heat and mass balances, pressure losses in flows around technical flying objects and their modules, select the parameters of fans, compressors and turbines for flow systems, as well as calculate thermodynamic waveforms in heat machines, with particular emphasis on TSO and DTSO engines with Joule-Brayton cycle

## Social competences

1. Is aware of the importance of maintaining the principles of professional ethics

2. Understands the need for critical assessment of knowledge and continuous learning

3. can inspire and organize the learning process of others

#### Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows: written exam

final test

laboratory reports and test

## **Programme content**

Turbine engines as a drive for aircraft engines. Requirements, construction and operational requirements for drive units and automatic turbine engine control systems. Examples of practical implementation of control systems of modern turbine engines. Operation of aircraft powered by turbine and piston engines according to standards specified in the requirements of EASA PART 66 aviation regulations

PART - 66 (THEORY - 15 hours)

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS) pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

# MODULE 16. PISTON ENGINE

- 16.4 Engine fuel systems
- 16.4.3 Electronic engine control

Operation of engine control and fuel metering systems including electronic

engine management (FADEC);

System layout and components. [2]

# **Teaching methods**

lecture, description, discussion, blackboard exercises, independent practical exercises, laboratories
