### Prerequisites

Basic knowledge of technique (sem.1)

### Course objective

To familiarize students with the basic principles of construction, operation and operation of general purpose machines and equipment, which are equipped in an industrial plant

### Course-related learning outcomes

#### Knowledge

knows the basic issues of construction, technology and techniques related to logistics [P6S\_WG\_01]

knows the basic issues of mechanics, construction and operation of machines related to logistics [P6S\_WG\_02]

#### Skills

is able to apply the right experimental and measuring techniques to solve the problem within the studied subject, including computer simulation within logistics and its specific issues, and supply chain management [P6S\_UW\_03]

is able to identify changes in requirements, standards, regulations, technical progress and reality of the labor market, and based on them determine the needs of supplementing knowledge [P6S\_UU\_01]

#### Social competences

is aware of initiating activities related to the formulation and transfer of information and cooperation in society in the field of logistics [P6S\_KO\_02]

is aware of cooperation and work in a group on solving problems within logistics and supply chain management [ P6S\_KR\_02]

### Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Formative assessment:

in lectures: on the basis of answers to questions about material modified in previous lectures.

Summary summary:

lecture - written test on the basis of previously prepared questionnaire

### Programme content

The program of the subject covers the following issues: the genesis of the science of machine construction and operation, Phases of the existence of a technical object, theories of operation. Rules for the construction and operation of equipment. Use of devices. Elements of tribology, friction, wear, surface layer lubrication, Basic issues related to reliability, quality and durability. Machine diagnostics. Types of diagnostic tests. Operation of machinery and equipment related to logistics, Operation of means of transport and storage equipment.
