

## COURSE DESCRIPTION CARD - SYLLABUS

Course name

Automation and Robotics

### Course

Field of study

Mechanical and Automotive Engineering

Area of study (specialization)

-

Level of study

First-cycle studies

Form of study

part-time

Year/Semester

3/5

Profile of study

general academic

Course offered in

Polish

Requirements

compulsory

### Number of hours

Lecture

18

Laboratory classes

0

Other (e.g. online)

0

Tutorials

9

Projects/seminars

0

### Number of credit points

3

### Lecturers

Responsible for the course/lecturer:

Ph.D., D.Sc. Wojciech Sawczuk

email: wojciech.sawczuk@put.poznan.pl

tel. +48 61 224 4510

Faculty of Civil and Transport Engineering

ul. Piotrowo 3, 60-965 Poznan

Responsible for the course/lecturer:

MSc. Julian Kominowski

email: julian.kominowski@put.poznan.pl

tel. +48 61 665 2841

Faculty of Civil and Transport Engineering

ul. Piotrowo 3, 60-965 Poznań

### Prerequisites

KNOWLEDGE: the student has a basic knowledge of automation in means of transport.

SKILLS: the student is able to use the acquired knowledge in learning and solving automatic problems.

SOCIAL COMPETENCES: The student is able to define important priorities in solving the tasks set before

him, is able to effectively cooperate in a group taking different roles in it Objective of the course

Understanding the role of automation in transport, getting to know the construction and purpose of automatic devices, interpretation of the characteristics of automation components.

### Course objective

Understanding the role of automation in transport and mechanics, and improving efficiency and effectiveness in traffic management and vehicle monitoring.

### Course-related learning outcomes

#### Knowledge

Has knowledge in the field of mathematics, including algebra, analysis, theory of differential equations, probability, analytical geometry necessary to: describe the operation of discrete mechanical systems, understand computer graphics methods, describe the operation of electrical and mechatronic systems.

Has knowledge in the field of physics, including the basics of classical mechanics, optics, electricity and magnetism, solid state physics, quantum and nuclear physics, necessary to understand specialist lectures in the field of the theory of construction materials and materials science, theory of machines and mechanisms, theory of electric drives and mechatronic systems .

Has basic knowledge of the basics of machine design and the theory of machines and mechanisms, including mechanical vibrations.

#### Skills

Can obtain information from literature, the Internet, databases and other sources. Can integrate the obtained information, interpret and draw conclusions from it, and create and justify opinions.

Can properly use modern equipment for measuring major physical quantities, used in machine research and production control.

Can use learned mathematical theories to create and analyze simple mathematical models of machines and their elements, and simple technical systems.

#### Social competences

Is ready to critically assess his knowledge and received content

Is ready to recognize the importance of knowledge in solving cognitive and practical problems and to consult experts in case of difficulties in solving the problem on its own.

Is willing to think and act in an entrepreneurial manner.

### Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

For discussion, ongoing preparation and activity in class. Written credit for lectures and classes.

### Programme content

Definition of control, control device and automatic control, definition of the set point, current value and control input, definition of the controller, control variable and control variable, diagram and description of the open and closed control system, control system in steady and transient states and what conclusions result from it, types and characteristics of input signals and their equations, operator and spectral transfer function, formulas and an example, the essence of the Laplace transform, an example

of any two transformations, types of terms in an automatic control system with a diagram, Connecting terms (series, parallel, with feedback) ) formulas and examples, connecting terms (serial, parallel, with feedback) formulas and examples, types of linear elements,  $f(t)$  functions, transfer functions, characteristics, and examples, Nyquist and Bode frequency characteristics, examples on any terms, testing properties static and dynamic (static and dynamic characteristics), time constant versus period, methods of determining on the example of any element, tasks of regulators in the automatic control system, division of regulators with description and examples, characteristics of P, I, PI, PD and PID regulators, error and insensitivity zone of selected controllers, integration time and differentiation time on the example of selected controllers, time waveforms at the output for ideal and real controllers.

### Teaching methods

1. Lecture with multimedia presentation.
2. Exercises - solving problems.

### Bibliography

Basic

1. Żelazny M., Podstawy automatyki, Materiały pomocnicze do wykładu,
2. Rumatowski K., Podstawy automatyki cz.1, Wydawnictwo Politechniki Poznańskiej 2004,
3. Rumatowski K., Podstawy automatyki cz.2, Wydawnictwo Politechniki Poznańskiej 2004.

Additional

1. Urbaniak A., Podstawy automatyki, Wydawnictwo Politechniki Poznańskiej 2001,
2. Horla D., Podstawy automatyki, Wydawnictwo Politechniki Poznańskiej 2003.

### Breakdown of average student's workload

|   | Hours | ECTS |
|---|-------|------|
| Total workload  | 75    | 3,0  |
| Classes requiring direct contact with the teacher   | 27    | 1,5  |
| Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation) <sup>1</sup> | 48    | 1,5  |

<sup>1</sup> delete or add other activities as appropriate
