POZNAN UNIVERSITY OF TECHNOLOGY

COURSE DESCRIPTION CARD - SYLLABUS

Course name
Real-time systems

Course

Field of study	Year/Semester
Automatic Control and Robotics	2/3
Area of study (specialization)	Profile of study
	general academic
Level of study	Course offered in
First-cycle studies	english
Form of study	Requirements
full-time	compulsory

Number of hours

Lecture	Laboratory classes	Other (e.g. online)
30		
Tutorials	Projects/seminars	

Number of credit points

5

Lecturers

Responsible for the course/lecturer:

Jarosław Warczyński, PhD

email: jarslaw.warczynski@put.poznan.pl

tel. 61 665 2877

Faculty of Control, Robotics and Electricacal
Engineering

ul. Piotrowo 3A 60-965 Poznań

Responsible for the course/lecturer:

Prerequisites

1   Knowledge

Student has knowledge in mathematical fields of logic and discrete mathematics necessary to description and analysis of sequential and discrete systems, description of control algorithms and stability analysis of dynamical systems. [K1_W01 (P6S_WG)]

Has also systematized knowledge of methods and technics of procedural and object programming. [K1_W10 (P6S_WG)]

2   Skills

POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

Is able to obtain information from bibliography, databases and other sources; has the ability to self-educate in order to improve and update professional competences. [K_U01 (P6S_UU)]

Is able to document and present the results of an engineering task. Is able to communicate using specialized terminology. Can take part in a debate - present, assess and discuss various opinions and positions. [K_U03 (P6S_UK)]

3   Social competencies

The graduate is ready to critically evaluate his or her knowledge. The graduate understands the need for and knows the possibilities of continuous learning - improving professional, personal and social competences, the graduate is able to inspire and organize the learning process of others. [K_K01 (P6S_KK)]

The graduate is aware of the need for a professional approach to technical issues, meticulous familiarization with the documentation and environmental conditions in which the equipment and its components can operate. The graduate is ready to observe the rules of professional ethics and to demand it from others, to respect the diversity of opinions and cultures. [K_K04 (P6S_KR)]

Course objective
Acquaintance of the basic knowledge about real-time applications and supporting them real-time operating systems

Course-related learning outcomes
Knowledge

1.   The graduate knows and understands in advanced level the methods of signal processing in the time and frequency domain. The graduate has an orderly knowledge of signal and information theory. [K1_W05 (P6S_WG)]

2.   Ma podstawową wiedzę w zakresie metrologii, zna i rozumie w zaawansowanym stopniu metody pomiaru wielkości elektrycznych i nieelektrycznych; zna i rozumie w zaawansowanym stopniu metody obliczeniowe i narzędzia informatyczne niezbędne do analizy wyników eksperymentu. [K1_W11 (P6S_WG)]

3.   The graduate knows and understands to an advanced level the theory and methods of computers, computer systems networks and operating systems architecture, including real-time operating systems. [K_W13 (P6S_WG)]

4.   The graduate knows and understands to an advanced level the theory and methods of architecture and programming of microprocessor systems, knows and understands selected languages of high and low level microprocessor programming, knows and understands the principle of operation of basic peripheral modules and communication interfaces used in microprocessor systems. [K_W15 (P6S_WG)]

POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

5. The graduate is familiar with the current state and the latest development trends in the field of automation and robotics. The graduate knows and understands the fundamental dilemmas of modern civilization connected with the development of automation and robotics. [K_W21 (P6S_WG P6S_WK)]

Skills

1. The graduate can construct an algorithm for a simple engineering task and implement, test and run it in a selected development environment on a PC for selected operating systems. [K1_U10 (P6S_UW)]

2. The graduate is able to select the type and parameters of the actuator system, measurement system, control unit and peripheral and communication modules for the selected application and to integrate them in the form of the final measurement and control system. [(K1_U17 (P6S_UW)]

3. Can plan, prepare and simulate the operation of simple automation and robotics systems. [K_K06 (P6S_KO)]

Social competences

1. The graduate is aware of the importance and understands the non-technical aspects and effects of engineering activities, including its impact on the environment and the associated responsibility for decisions taken. The graduate is ready to take care of the achievements and traditions of the profession. [K_K02 (P6S_KR)]

2. The graduate is ready to fulfil social obligations and co-organise activities for the benefit of the social environment. The graduate is aware of the social role of a graduate of a technical university and understands the need to formulate and convey to the public (in particular through the mass media) information and opinions on the achievements of automation and robotics and other aspects of engineering activities; the graduate makes efforts to communicate such information and opinions in a generally understood manner. [K_K06 (P6S_KO)]

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Formative assessment:

based on answers to questions about the material discussed in previous lectures.

Main rating:

verification of assumed learning outcomes is carried out by:

i. assessment of knowledge and skills demonstrated during the written lecture exam

ii. assessment of knowledge and skills based on individual discussion of the results of the written exam (additional control questions),

Programme content

POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

The matter of real-time applications and programs for critical applications. Require-ments for real-time operating systems. The architecture of the real-time operating sys-tems. The systems kernel and its functions. Creation of processes and methods of their scheduling. Real-Time Scheduling Algorithms: RMS, EDF, LLF, MLLF, MUF, MMUF. Interprocess communications. Message-passing system. Process Synchronization. Principles of constructing client-server applications. Basic system management func-tions. Contraction of real-time applications. Examples of real-time operating systems: QNX, ECOS, and WXWorks systems.

Teaching methods

Lectures - a lecture with a multimedia presentation (including drawings, photos, animations, films) supplemented by examples given on the board, taking into account various aspects of the issues presented. Presenting a new topic preceded by a reminder of related content known to students in other subjects,

POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

Breakdown of average student's workload

	Hours	ECTS
Total workload	150	5,0
Classes requiring direct contact with the teacher	30	2,0
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation) [1]	120	3

---

[1] delete or add other activities as appropriate
