

## COURSE DESCRIPTION CARD - SYLLABUS

Course name

Basics of metrology

### Course

Field of study

Technical and Informatics Education

Area of study (specialization)

Level of study

First-cycle studies

Form of study

full-time

Year/Semester

1/2

Profile of study

general academic

Course offered in

polish

Requirements

compulsory

### Number of hours

Lecture

15

Tutorials

Laboratory classes

15

Projects/seminars

Other (e.g. online)

### Number of credit points

4

### Lecturers

Responsible for the course/lecturer:

dr inż. Lidia MARCINIAK - PODSADNA

Responsible for the course/lecturer:

Email : lidia.marciniak-podsadna@put.poznan.pl

Tel. 616653569

Wydział Inżynierii Mechanicznej

Piotrowo 3, 60-965 Poznań

### Prerequisites

Knowledge in the field of mathematical analysis and statistics, technical drawing and machine parts. Willingness to acquire new knowledge and skills. The ability to think logically and use information obtained from various sources.

### Course objective

Learning the basic concepts of measurement techniques. Becoming familiar with instruments and measuring methods used in mechanical engineering. Acquiring the ability to calculate and select tolerances and the fit symbol for holes, shafts and threads. Gaining knowledge about measurement methods, error calculation and calculating the uncertainty of direct and indirect measurement.

### Course-related learning outcomes

#### Knowledge

1. The student knows the SI system of measurement units - [K\_W01, K\_W03]
2. The student knows definitions and classification of individual types of errors, their elimination or estimation - [K\_W03, K\_W10]
3. The student knows the statistical methods of elaborating the measurement results - [K\_W10, K\_W25]
4. The student knows the rules of estimating the measurement uncertainty - [K\_W10, K\_W25]
5. The student knows the basic measuring equipment used to measure machine parts - [K\_W10, K\_W11]

#### Skills

1. The student is able to perform checking a measuring instrument according to the instructions - [K\_U13]
2. The student is able to calculate measurement uncertainty for direct and indirect measurements - [K\_U01]
3. The student is able to determine the measurement uncertainty of an instrument using the A and B method - [K\_U04]
4. The student is able to make a statistical analysis of the measurement results - [K\_U01, K\_U13]
5. The student is able to analyze the tolerances of the manufactured products and knows the rules of fitting parts - [K\_U01, K\_U13]

#### Social competences

1. Is aware of the importance of carrying out correct measurements of machine parts - [K\_K01]
2. Can defend the metrological calculations made - [K\_K02]
3. Can independently develop knowledge in the field of metrology - [K\_K04]

### Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture: Final test

Laboratory: Credit based on an oral or written answer concerning the content of each performed laboratory exercise and a written report. To obtain a credit, all exercises must be passed.

### Programme content

Lecture:

Measurement theory, measurement and its essence, measurement result, methods, types and methods of measurement, SI system of measurement units, definition of a meter, etalons, standards of length and angle measurements, gauge blocks, measuring rolls and balls, angle plates, angles, pattern hierarchy, measurement errors, definition and classification, systematic, random and excessive errors, elimination and estimation of errors, determination of measurement uncertainty, statistical analysis of measurement results, measurement tools, their division and characteristics, measurement methods, errors of indirect methods, caliper, micrometric instruments, sensors, length gauges, altimeters, microscopes, projectors, systems of tolerances and fits of machine parts, measurements of angles and cones. Basics of the coordinate technique.

Laboratory:

1. Checking measuring instruments;
2. Indirect measurements;
3. Statistical analysis of the measurement results;
4. Measurements of gears.
5. Measurements of external and internal dimensions;
6. Thread measurements.

### Teaching methods

1. During the lecture, the theory is supported by examples. The lecture is conducted in an interactive way, questions
2. Laboratory exercises: conducting experiments, solving problems, discussion.

### Bibliography

Basic

1. Jakubiec W., Malinowski J.: Metrologia wielkości geometrycznych. WNT, Warszawa, 2018

**Breakdown of average student's workload**

	Hours	ECTS
Total workload	100	4,0
Classes requiring direct contact with the teacher	35	2,0
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation) <sup>1</sup>	65	2,0
