

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Gas technology

Course

Field of study

Industrial and Renewable Energy

Area of study (specialization)

Thermal and renewable energy

Level of study

Second-cycle studies

Form of study

full-time

Year/Semester

2/3

Profile of study

general academic

Course offered in

polish

Requirements

compulsory

Number of hours

Lecture

30

Tutorials

Laboratory classes

15

Projects/seminars

Other (e.g. online)

Number of credit points

2

Lecturers

Responsible for the course/lecturer:

dr hab. inż. Rafał Ślefarski

email: rafa.slefarski@put.poznan.pl

tel. 616652218

Faculty of Transport Engineering

ul. Piotrowo 3 60-965 Poznań

Responsible for the course/lecturer:

Prerequisites

Student has knowledge in the field of thermodynamics and fluid mechanics and knowledge about

phenomena existing in energetic machines such as gas turbine, gas engines and knowledge about production, pre-treatment, storage and transportation of gaseous fuels. Student should also have skills required to analyze simple energy systems in terms of energy production (combustion processes), heat energy transport, flow phenomena and impact on the natural environment.

Course objective

To acquaint students with modern, low-emission and high efficiency technologies connected to use of gaseous fuels in heat and electricity production as well as production of non-standard gaseous fuels.

Course-related learning outcomes

Knowledge

Has expanded knowledge in the construction and operation of energetic devices and machines powered by gaseous fuels.

He knows the main directions of development of the gas industry.

He knows the legal issues related to the design and use of energy systems powered by gas.

Skills

Is able to formulate and test hypotheses related to simple research problems in field of gas technology.

Is able to manage the work of the team.

Is able to interact with other people as part of team work in solution of scientific problems related to gas energy sector.

Social competences

He is ready to critically assess his knowledge in the field of extraction, production and use of gas fuels in the energy sector.

Is ready to initiate actions for the social interest related to the improvement of the country's energy security.

Is ready to think and act in an entrepreneurial way.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture: Knowledge acquired during the lecture is verified during the final test carried. Each test consists of 5 questions (open). Passing threshold: 50% of points. Final issues on the basis of which questions are prepared will be sent to students by e-mail using the university e-mail system.

Skills acquired as part of the laboratory classes will be verified basis on the final test, consisting of 10 tasks differently scored depending on their level of difficulty. Passing threshold: 50% of points.

Programme content

Lecture: Methods and apparatus for syngas, biogas and pyrolysis gas production, advanced gas turbine cycles, new ignition systems for gas engines, low emission combustion processes of gaseous fuels in furnace and boilers, thermal neutralization of VOCs, reduction systems for toxic compounds, energy storage processes, power to X (ammonia, hydrogen)

Laboratory: analysis of the process of combustion of gaseous fuels in a diffusion burner, performance of the energy balance of an industrial furnace, assessment of the operation of a gas boiler, determination of the efficiency of the condensing boiler, assessment of the impact of the plotting parameters on the emission of toxic compounds during the combustion of gaseous fuels, determination of the properties of gaseous fuels

Teaching methods

Lecture: multimedia presentation, illustrated with examples on the board

Laboratory: multimedia presentation and performance of tasks given by the teacher - practical exercises.

Bibliography

Basic

Dobski, T.: Combustion Gases in Modern Technologies, 2scd Ed., Wydawnictwo Politechniki Poznańskiej

Jarosiński J.: Techniki czystego spalania, WNT,

Molenda J.: Gaz ziemny. Paliwo i surowiec, WNT, Warszawa

Additional

Hiroshi T., Gupta A.: High Temperature Air Combustion

A. Lefebvre: Gas Turbine Combustion

R. Stone: introduction to Internal Combustion Engines, Third edition

Joachim G. Wunning: Handbook of Burner Technology for Industrial Furnaces

Breakdown of average student's workload

	Hours	ECTS
Total workload	60	2,0
Classes requiring direct contact with the teacher	45	1,5
Student's own work (literature studies, preparation for laboratories, development of laboratories, preparation for passing and exam, participation in consultations) ¹	15	0,5

¹ delete or add other activities as appropriate
