5

Lecturers

Responsible for the course/lecturer:

prof. dr hab. inż. Mariusz Głąbowski

mariusz.glabowski@put.poznan.pl

tel: 61 665 3904

Faculty of Computing and Telecommunications

Responsible for the course/lecturer:

dr inż. Maciej Sobieraj

maciej.sobieraj@put.poznan.pl

tel: 61 665 3909

Faculty of Computing and Telecommunications

Prerequisites

A student starting this course should have basic knowledge of computer networks, cryptographic algorithms, Windows and Linux operating systems. He should also have the ability to obtain information from the indicated sources and be ready to cooperate as part of the team.

Course objective

Providing students with knowledge in the field of broadly understood ICT security as well as methods and tools used to estimate and control the risk of breach of confidentiality, integrity and data availability. To acquaint students with advanced methods, techniques and tools used in solving complex engineering tasks in the area of designing and maintaining network systems responsible for the security of transmitted data. The course covers knowledge and skills needed to successfully handle the tasks, duties, and responsibilities of an Cybersecurity Analyst working in a Security Operations Center (SOC).

As part of the course, cybersecurity domains will be discussed as basic elements for managing the cybersecurity of an organization. Presentation of the principles of operation of the Computer Emergency Response Teams, Security Operations Center. Getting to know the assumptions of Security Information and Event Management. As part of the exercises, the student will develop his own SOC concept taking into account real conditions.

Course-related learning outcomes

Knowledge

Has ordered and theoretically founded general knowledge related to key issues in the field of ICT security.

Has advanced detailed knowledge of selected issues in the field of broadly understood ICT security as well as methods and tools used to estimate and control the risk of breach of confidentiality, integrity and data availability.

Has knowledge of development trends and the most important new achievements of IT and telecommunications in the design and maintenance of network systems responsible for the security of transmitted data.

Has advanced and detailed knowledge of the processes of the systems used to estimate and control the risk of breach of confidentiality, integrity and data availability.

Has knowledge of the ethical principles related to the activities necessary to ensure the security of ICT systems.

Skills

Can obtain information on ICT security threats and techniques for their estimation and control. Obtained information (in Polish and English) can integrate and subject to critical evaluation.

Can use experimental methods to formulate and solve engineering tasks and simple research problems in the area of ICT security.

Can assess the usefulness and the possibility of using new hardware and software solutions for solving engineering tasks consisting in building secure data transmission systems.

Is able to cooperate in a team responsible for ensuring the security of ICT systems.

Is able to define the directions of further learning in order to meet the challenges posed by people responsible for the security of ICT systems.

Social competences

Student understands that in the field of ICT security, knowledge and skills very quickly become obsolete. Understands the importance of using the latest knowledge in the field of ICT security in solving research and practical problems. Is aware of the need for a professional approach to solving ICT security problems and taking responsibility for the projects he proposes.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Knowledge acquired as part of the lecture is verified by a written test.

Test issues, on the basis of which questions are prepared, are sent to students by e-mail using the university e-mail system.

The written test consists of from 3 to 5 questions for which a descriptive answer is expected. Each answer to a question is rated on a scale of 0 to 5 points. Each question is scored equally. Passing threshold: 50% of points.

In the case of the oral test, students draw questions from a set of 30 questions. In the case of a written test, questions are selected by the teacher.

Skills acquired as part of the laboratory are verified on an ongoing basis. At the end of each laboratory class, the correctness of configuration of network devices is assessed on a scale of 2 to 5. The final grade is the average of grades obtained from individual laboratory classes.

Programme content

1. The following topics will be discussed as part of the lecture:

- Review of TCP/IP protocols.
- Fundamentals of Cybersecurity (NIST; Threats, Vulnerabilities, Exploits; IDS, IPS).
- Types of Attacks and Vulnerabilities.
- Fundamentals of Cloud Computing and Cloud Security (Cloud Models; DevOps, CI/CD; Cloud Security Threats).
- Fundamentals of IoT Security.
- Fundamentals of Access Control (AAA, Processes, Responsibilities, Mechanisms; Identity and Access Control Implementations).
- Review of PKI, Root and Identity Certificates, IPSec, Virtual Private Networks.
- Fundamentals of Security Operations Management (Identity and Access Management; Events and Log Management; Assessts and Change Managment; Vulnerability Management; CSIRT, SOC, SIEM, SOAR).
- Fundamentals of Intrusion Analysis (Incident Response Process; Incident Response Team; Artifacts).
- Introduction to Digital Forensic.
- Telemetry and Analysis of Network and End Devices (Logs, Packet Capturing, Network Profiling; Host Profiling).
- Data and Event Analysis (Normalizing Data; Various Types of Analysis).

- Tasks of Security Operations Centers (SOCs).
- Cybersecurity Models and Threat Hunting (Threat modelling, e.g., STRIDE, PASTA, CVSS, Attack trees, etc.);).
- Fundamentals of AI Security
- Fundamentals of Web Security
- Fundamentals of Security and Ethics.

2. Laboratory topics:

In line with the content of lectures.

Teaching methods

Informative lecture: multimedia presentation, illustrated with examples on the board.

Laboratory exercises: practical exercises in groups using network devices.

Breakdown of average student's workload

	Hours	ECTS
Total workload	125	5,0
Classes requiring direct contact with the teacher	60	2,5
Student's own work (literature studies, preparation for laboratory classes, preparation for tests) ¹	65	2,5

¹ delete or add other activities as appropriate
