

## COURSE DESCRIPTION CARD - SYLLABUS

Course name

English

### Course

Field of study

Computing

Area of study (specialization)

-

Level of study

First-cycle studies

Form of study

full-time

Year/Semester

2/4

Profile of study

general academic

Course offered in

English

Requirements

compulsory

### Number of hours

Lecture

0

Laboratory classes

0

Other (e.g. online)

0

Tutorials

30

Projects/seminars

0

### Number of credit points

1

### Lecturers

Responsible for the course/lecturer:

Łukasz Woźniakowski, MA

Responsible for the course/lecturer:

-

email: lukasz.wozniakowski@put.poznan.pl

### Prerequisites

Knowledge: Language proficiency corresponding to the B1 level according to the CEFR description of language proficiency levels

Skills: Mastering the grammatical structures and general vocabulary required for the secondary school leaving exam (matura) in a foreign language in terms of productive and receptive skills

Social competencies: Ability to work independently and in a team; the ability to use various sources of information

### Course objective

1. Bring students' language competencies to a minimum level of B2 according to CEFR
2. Develop students' ability to effectively use general academic language as well as language specific to the field of computer science in terms of four language skills
3. Improve students' ability to work with technical texts

4. Develop students' skills to help them succeed in the international labour market and everyday life.

### Course-related learning outcomes

#### Knowledge

By the end of the semester, students will master the technical vocabulary related to the following topics:

1. Artificial intelligence - [-]
2. Machine learning and deep learning - [-]
3. The future of IT and AI - [-]
4. The digital divide - [-]

Students will also be able to define and explain the terms, phenomena and processes related to the above topics.

#### Skills

By the end of the course, students will be able to effectively:

1. give a presentation in English on a technical or popular science topic, and talk about general and technical topics using the appropriate vocabulary and grammatical structures - [K\_U01 K\_U05]
2. express basic mathematical operations in English and interpret data presented in a diagram / chart - [K\_U04]
3. write a text in English explaining / describing a selected technical issue - [K\_U07]

#### Social competences

By the end of the course, students will be able to:

1. communicate effectively in English in a professional environment and in typical everyday situations, as well as use their language skills effectively to speak in public - [K\_K01 K\_K04]
2. recognize and use / understand cultural differences in behaviour, as well as business and private conversation in English, and in a different cultural environment - [K\_K02]

### Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Formative assessment: ongoing assessment in class (presentations, tests, writing tasks)

Summative assessment: course credit

### Programme content

1. Artificial intelligence
2. Machine learning and deep learning

3. The digital divide
4. The future of IT and AI
5. Academic writing: graph descriptions and longer written forms
6. Student projects
7. Speaking exam practice

### Teaching methods

1. presentation, discussing issues using examples given on the board, doing vocabulary and grammar exercises
2. discussions, teamwork, multimedia presentations, projects
3. individual student work

### Bibliography

### Breakdown of average student's workload

	Hours	ECTS
Total workload	40	1,0
Classes requiring direct contact with the teacher	30	0
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation) <sup>1</sup>	10	0

<sup>1</sup> delete or add other activities as appropriate
