## POZNAN UNIVERSITY OF TECHNOLOGY

EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

## **COURSE DESCRIPTION CARD - SYLLABUS**

Course name

Robotics

Course

Field of study Year/Semester

Biomedical engineering 4/7

Area of study (specialization) Profile of study general academic

Level of study Course offered in

First-cycle studies Polish

Form of study Requirements full-time compulsory

Number of hours

Lecture Laboratory classes Other (e.g. online)

15 15 0

Tutorials Projects/seminars

0

**Number of credit points** 

2

## Lecturers

Responsible for the course/lecturer: Responsible for the course/lecturer:

dr hab. inż. Olaf Ciszak, prof. PP dr inż. Piotr Siwak

e-mail: olaf.ciszak@put.poznan.pl e-mail: piotr.siwak@put.poznan.pl

## **Prerequisites**

Basic knowledge of mathematics, physics (mechanics) and programming principles (core curriculum for secondary schools, basic level).

## **Course objective**

1. Providing students with theoretical and practical issues related to the construction, programming and application of robots in the scope specified by the program content appropriate for the field of study.

## POZNAN UNIVERSITY OF TECHNOLOGY

## EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

- 2. Developing students' skills in solving simple problems and performing simple experiments as well as analyzing the results based on the acquired knowledge.
- 3. Shaping students' teamwork skills.

## **Course-related learning outcomes**

### Knowledge

- 1. The student is able to identify, describe and explain the principle of operation of the basic elements of the construction of an industrial robot with the meaning and role of basic programming (control) instructions.
- 2. The student is able to choose the appropriate programming instructions for a specific task in the field of programming industrial robots.
- 3. The student is able to identify and describe the issues (problems) of operation and diagnostics of industrial robots, including their life cycle.

#### Skills

- 1. Student is able to identify a technical problem, determine its complexity level, and then propose a solution taking into account the final goal (effect).
- 2. The student is able to develop control programs for industrial robots cooperating with external devices (sensors, control and measurement devices and technological devices, etc.) and to test the control program taking into account the initial and final conditions.

### Social competences

- 1. The student is able to actively engage in solving given problems, independently develop and expand his competences and cooperate in a team.
- 2. The student is able to properly define the priorities for the realization of the tasks he or she sets.

## Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

## Lecture

Final test (20 questions carried out at the end of the semester)

51-60% dst; 61-70% dst +; 71-80% db; 81-90% db +; 91-100% very good

Lab

Passing on the basis of an oral or written answer concerning the content of each performed laboratory exercise, a report on each laboratory exercise according to the guidelines set out in the guide to exercises and indications of the laboratory teacher. In order to pass the laboratories, all exercises must be passed (positive grade from the answers and the report).

### **Programme content**

## POZNAN UNIVERSITY OF TECHNOLOGY

## EUROPEAN CREDIT TRANSFER AND ACCUMULATION SYSTEM (ECTS)

pl. M. Skłodowskiej-Curie 5, 60-965 Poznań

#### Lecture

Basic concepts: definition, classification and application of robots, construction of robots and manipulators, kinematic chains (open, closed, flat and spatial, series and parallel, designation, kinematic pairs, number of degrees of freedom and mobility); coordinate systems; Kinematics of an industrial robot - simple and reverse transformation; PTP, MP and CP control, Fundamentals of industrial robot programming; Biomechanics of human movement, Health and safety conditions when working with manipulators and robots.

### Lab

Practical exercises in the field of principles and methods of programming educational and industrial robots.

# **Teaching methods**

- 1. Lecture: presentation illustrated with examples given on the board, solving problems.
- 2. Laboratory exercises: conducting experiments, working in teams, discussion.

## **Bibliography**

#### Basic

- 1. Żurek J., Podstawy Robotyzacji Laboratorium., WPP, Poznań, 2006
- 2. Morecki A., Knapczyk J., Podstawy robotyki. Teoria i elementy manipulatorów i robotów. WNT, Warszawa
- 3. Honczarenko J., Roboty przemysłowe. Budowa i Zastosowanie, WNT, Warszawa, 2010
- 4. Podręczniki programowania robotów, IRp-6, Fanuc, Panasonic

#### Additional

- 1. Szkodny T., Podstawy robotyki. Wydawnictwo Politechniki Śląskiej, Gliwice, 2012
- 2. Morecki A., Knapczyk J., Kędzior K., Teoria mechanizmów i manipulatorów. Podstawy i przykłady zastosowań w praktyce, WNT, Warszawa, 2004
- 3. Zielińska T., Maszyny Kroczące. Podstawy, projektowanie, sterowanie i wzorce biologiczne, PWN, Warszawa, 2003
- 4. Kurfess R.T., Robotics and Automation Handbook, CRC Press 2005
