

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Municipal Energy Systems

Course

Field of study

Environmental Engineering Second-cycle Studies

Area of study (specialization)

Heating, Air Conditioning and Air Protection

Level of study

Second-cycle studies

Form of study

full-time

Year/Semester

1/2

Profile of study

general academic

Course offered in

polish

Requirements

compulsory

Number of hours

Lecture

30

Laboratory classes

Other (e.g. online)

Tutorials

15

Projects/seminars

15

Number of credit points

4

Lecturers

Responsible for the course/lecturer:

prof.dr hab.inż. Tomasz Mróz

email: tomasz.mroz@put.poznan.pl

tel. (61) 6652413

Wydział Inżynierii Środowiska i Energetyki

Berdychowo 4, 61-131 Poznań

Responsible for the course/lecturer:

dr inż. Łukasz Amanowicz

email: lukasz.amanowicz@put.poznan.pl

tel. (61) 665 2534

Instytut Inżynierii Środowiska i Instalacji

Budowlanych, Wydział Inżynierii Środowiska i

Energetyki Politechniki Poznańskiej

ul. Berdychowo 4, 61-131 Poznań

Prerequisites

1.Knowledge:

Classification of renewable and non-renewable primary energy sources, evaluation of energy capacity of demand and supply side of energy market; ,

Principles of energy balancing, economic and ecological evaluation of energy systems in built environment.

2.Skills:

Application of energy balance equation in evaluation of energy systems in built environment;

Calculation of coefficients of energy, economic and ecologic efficiency of energy systems in built environment;

3.Social competencies:

Awareness of the need to constantly update and supplement knowledge and skills.

Course objective

Purchase by the students the knowledge and skills in analysis of energy systems in communities and planning of their modernization and development

Course-related learning outcomes

Knowledge

1. The student has a theoretical and practical knowledge on energy systems in communities
2. The student has a theoretical and practical knowledge on the structure and principles of exploitation of electro-energy systems in communities
3. The student has a theoretical and practical knowledge on the structure and principles of exploitation of gas systems in communities and has a theoretical and practical knowledge on the structure and principles of exploitation of district heating and district cooling systems in communities
4. The student knows the principles of demand and supply side analysis of energy markets in communities and market interdependences between energy sides
5. The student knows the methods of multicriteria aided planning of modernization and development of energy market in communities

Skills

1. The student can evaluate the energy capacity of demand and supply side of energy market in communities
2. The student can identify and calculate the evaluation criteria of demand and supply side of energy markets in communities
3. The student can identify the basic trends of energy market development in communities
4. The student is able to use one of multicriteria analysis in planning of modernization and development of energy markets in communities

Social competences

1. The student understands the need for teamwork in solving theoretical and practical problems

2. The student is aware of the need to sustainable development of energy markets in communities

3. The student sees the need for systematic increasing his skills and competences

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lectures:

Written examination multiple choice test consisting of 30 questions

Continuous assessment during lectures (rewarding activity of the students).

Classes:

- Final colloquium

Project:

- preparation and defending the project on energy planning,

- continuous assessment during lectures (rewarding activity of the students).

Programme content

Lectures:

Basic knowledge on energy systems in communities: energy market, demand and supply side of energy market, market interdependency;

Description of demand and supply side of electro-energy system in communities; Principles of evaluation of demand and supply side of electro-energy system in communities;

Description of demand and supply side of gas system in communities; Principles of evaluation of demand and supply side of gas system in communities;

Description of demand and supply side of district heating and district cooling energy system in communities; Principles of evaluation of demand and supply side of district heating and cooling energy;

Evaluation criteria of energy systems in communities based on energy, economy and ecological issues;

The structure of the existing and planned municipal energy systems - development prospects.

Examples of energy supply systems - case studies.

Possibilities of using renewable energy sources, increasing energy efficiency and reducing the environmental burden in the context of energy supply systems.

Associated energy management.

Project:

1. Energy planning for chosen Energy system in community

Teaching methods

Lecture: lecture based on a multimedia presentation, interactive analysis of case studies, discussion,

Tutorials: interactive solving of computational examples

Projects: implementation of an individual project, discussion, consultation

Bibliography

Breakdown of average student's workload

	Hours	ECTS
Total workload	100	4,0
Classes requiring direct contact with the teacher	60	2,5
Student's own work (literature studies, preparation for tutorials, preparation for tests/project preparation) ¹	40	1,5

¹ delete or add other activities as appropriate
