Faculty of Civil and Transport Engineering

ul. Piotrowo 3, 60-965 Poznań

Prerequisites

KNOWLEDGE: The student has basic knowledge of the operation of means of transport and the impact of transport on the environment, knows the general characteristics of the functional properties and basic technical and operational parameters of land means of transport.

SKILLS: The student is able to use the acquired knowledge to solve simple problems related to determining the impact of transport on the environment and is able to apply the scientific method in solving research problems.

SOCIAL COMPETENCES: The student is able to work in a group taking different roles in it, shows independence in solving problems, gaining and improving the acquired knowledge and skills, is aware of

the importance and understands the non-technical aspects and effects of transport impact on the environment

Course objective

To acquaint students with the basic issues of transport technologies used in rail transport, discuss the organization and characteristics of freight rail transport, their infrastructure, the transport technologies used and the impact of these technologies on the environment.

Course-related learning outcomes

Knowledge

1. The student has knowledge of important development trends and the most important technical achievements and of other related scientific disciplines, in particular transport engineering.
2. The student has a basic knowledge of the life cycle of means of transport, both equipment and software, and in particular about the key processes occurring in the product life cycle.
3. The student knows the basic techniques, methods and tools used in the process of solving tasks in the field of transport, mainly of an engineering nature engineering.

Skills

1. The student is able to take into account in the process of formulating and solving tasks in the field of transport engineering also non-transport aspects, in particular social, legal and economic issues.
2. Student is able to assess - at least in a basic scope - various aspects of the risk associated with a transport project.
3. Student is able to make a critical analysis of the functioning of transport systems and other technical solutions and to evaluate these solutions, including: is able to effectively participate in the technical inspection and assess the transport task from the point of view of non-functional requirements, has the ability to systematically conduct functional tests.

Social competences

1. The student is aware of the importance of knowledge in solving engineering problems, knows examples and understands the causes of malfunctioning transport systems that have led to serious financial and social losses or to serious loss of health and even life.
2. The student can think and act in an entrepreneurial way, incl. finding commercial applications for the created system, taking into account not only business benefits, but also social benefits of the conducted activity.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

For discussion, ongoing preparation and activity in class. Written credit. Mandatory individual reports on laboratory activities. Final credit of laboratory classes.

Programme content

Reminding and systematizing information in the field of transport processes used in transport. Presentation of the type structure of freight transport in Poland and the used carriages for the transport of loads in rail transport. Acquainting with the basic provisions regulating freight transport in Poland. Technologies used in rail transport. Intermodal transport, transport of dangerous goods, technical rescue train. Organization of wagon transport. Composition of trains, technical and operational characteristics of points serving rail freight transport. Intermodal transport terminals, logistic centers. Acquainting students with the practical operation of railway business entities related to the transport of hazardous materials and intermodal transport - study visit to a research unit, logistics company and PKP group.

Teaching methods

1. Lecture with multimedia presentation
2. Computational exercises

Bibliography

7. Gronowicz J.: Ochrona środowiska w transporcie lądowym. Wydawnictwo i Zakład Poligrafii Instytutu Technologii Eksploatacji Radom 2005.

9. Regulamin międzynarodowego przewozu kolejami towarów niebezpiecznych RID.
10. Instrukcja postępowaniu przy przewozie koleją towarów niebezpiecznych Ir-16.
11. Instrukcja o kolejowym ratownictwie technicznym Ir- 15..

Breakdown of average student's workload

	Hours	ECTS
Total workload	90	4,0
Classes requiring direct contact with the teacher	27	1,0
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation) ¹	63	3,0

¹ delete or add other activities as appropriate
