

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Structural fire engineering [S2Bud1-KB>IPKB]

Course

Field of study

Civil Engineering

Year/Semester

1/2

Area of study (specialization)

Structural Engineering

Profile of study

general academic

Level of study

second-cycle

Course offered in

polish

Form of study

full-time

Requirements

compulsory

Number of hours

Lecture

0

Laboratory classes

0

Other (e.g. online)

0

Tutorials

0

Projects/seminars

0

Number of credit points

3,00

Coordinators

dr inż. Michał Malendowski

michal.malendowski@put.poznan.pl

Lecturers

Prerequisites

Student should have a knowledge of mathematics and physics, particularly he/she should be able to use calculus to solve engineering problems and have a knowledge of structural engineering, strength of materials and basics of the theory of elasticity and plasticity. Student should also be able to analyze engineering problems using critical thinking, and he/she should be able to elaborate his/her analyses in the form of engineering report. Student should be able to critical research information from given and new sources.

Course objective

The course objective is to deliver the knowledge of material and structural behaviour in fire and modelling of recognized in fire physical processes taking into account reciprocal dependences between them.

Course-related learning outcomes

none

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:

The knowledge received during the course is verified at the end of the semester based on two tests: theoretical test and calculation test. The theoretical test consists of 10-20 questions, which can differ between each other in scope and scoring. The calculation test consists of 5-10 questions, which also can differ between each other in scope and scoring.

The lectures grade is an averaged grade from theoretical and calculation tests.

The tutorials grade is the grade from calculation test.

The skills received during laboratories are verified based on evaluation of reports elaborated by individual students. The reports describe effects of students' work on the problems given to them during the classes. To pass the course, each student have to receive minimum 50% points from each type of class.

Programme content

All following topics constitute programme content of each individual type of classes: lectures, tutorials and laboratories.

1. Physical processes observed in civil engineering structures during fire. Qualitative and quantitative measures.
2. Material behaviour at elevated temperature. Physical and mechanical properties.
3. Structure behaviour in fire.
4. Fire models, heat transfer models, material models, structural models.
5. Classical and advanced design approaches for structures in fire.

Teaching methods

1. Lectures: informative lectures, problem-oriented lectures, conversations; use of presentations and blackboards.
2. Tutorials: direct instructions - teacher convey knowledge to students primarily through scripted lesson plans; use of presentations and blackboards.
3. Laboratories: teacher first guides students showing the task, then offers support and guidance as students work on projects. Classes require computers with specialized software installed.

Bibliography

Basic

1. Eurocodes: EN 1990, EN 1991-1-1, EN 1991-1-2, EN 1992-1-1, EN 1992-1-2, EN 1993-1-1, EN 1993-1-2, EN 1994-1-1, EN 1994-1-2.
2. Franssen, J-M, Vila Real, P. (2013) Fire Design of Steel Structures.
3. Hertz, K. (2019) Design of Fire-resistant Concrete Structures.
4. Maślak, M. (2008) Trwałość pożarowa stalowych konstrukcji prętowych.
5. Kowalski, R. (2019) Konstrukcje żelbetowe w warunkach pożarowych.
6. Anderberg et al. (2004) Background documents to EN 1992-1-2.

Additional

7. Purkiss, J. A., Li, L-y (2017) Fire Safety Engineering Design of Structures.
8. FIB 38 (2007) Fire design of concrete structures - materials, structures and modelling.
9. Wang, Y., Burgess, I., Wald, F., Gillie, M. (2012) Performance-Based Fire Engineering of Structures.

Breakdown of average student's workload

	Hours	ECTS
Total workload		
Classes requiring direct contact with the teacher		
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)
