COURSE DESCRIPTION CARD - SYLLABUS

Course name
Electrical Power Engineering [S1Eltech1>ElEn2]

Course

Field of study
Electrical Engineering

Year/Semester
3/5

Area of study (specialization)
–

Profile of study
general academic

Level of study
first-cycle

Course offered in
polish

Form of study
full-time

Requirements
compulsory

Number of hours

Lecture
15

Laboratory classes
0

Other (e.g. online)
0

Tutorials
0

Projects/seminars
0

Number of credit points

2,00

Coordinators

dr hab. inż. Bartosz Ceran prof. PP
bartosz.ceran@put.poznan.pl

dr inż. Radosław Szczerbowski
radoslaw.szczerbowski@put.poznan.pl

Lecturers

Prerequisites

Student has basic knowledge of electrical power engineering. Student has the ability to effectively self educate in a field related to the chosen field of study. Student is aware of the need to expand their competences, and is ready to cooperate as part of a team.

Course objective

Getting to know the physical basics of electricity generation in various types of power plants. Learning about issues related to the combustion of fossil fuels. Getting to know the construction and principles of operation of basic energy devices.

Course-related learning outcomes

Knowledge:
1. General knowledge on the construction of the power system and understanding of electricity generation processes.

2. Basic knowledge of energy conversion in various types of power plants, including in particular conventional power plants.

Skills:
1. Student is able to evaluate electricity generation technologies in terms of their efficiency and environmental impact.
2. Student is able to test and diagnose simple energy systems and devices.

Social competences:
1. Student is able to work in a group during laboratory tests and present the effects of the work done.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:
Lecture
- written exam

Programme content

Lecture
Thermal cycles of steam, gas, gas-steam and nuclear power plants. Methods of improving the efficiency of thermal cycles. Technological systems of power plants and heat and power plants.

Teaching methods

Lecture
Lecture with a multimedia presentation supplemented with examples given on the blackboard.

Bibliography

Basic
1. M. Pawlik, F. Strzelczyk: Elektrownie, WNT W-wa 2012, 2017
2. T.Chmielniak: Technologie energetyczne, WNT W-wa 2014
3. J. Marecki: Podstawy przemian energetycznych, WNT W-wa 2014

6. Szczerbowski R. Energetyka węglowa i jądrowa Wybrane aspekty. Wydawnictwo Fundacja na rzecz Czystej Energii. Rok wydania 2017

Breakdown of average student's workload

	Hours	ECTS
Total workload	42	2,00
Classes requiring direct contact with the teacher	17	1,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	25	1,00
