

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Fundamentals of machine construction [N1Energ1>PKN]

Course

Field of study

Power Engineering

Year/Semester

2/3

Area of study (specialization)

–

Profile of study

general academic

Level of study

first-cycle

Course offered in

polish

Form of study

part-time

Requirements

compulsory

Number of hours

Lecture

20

Laboratory classes

0

Other (e.g. online)

0

Tutorials

0

Projects/seminars

10

Number of credit points

3,00

Coordinators

dr hab. inż. Michał Śledziński

michal.sledzinski@put.poznan.pl

Lecturers

Prerequisites

Basics of mechanics and strength of materials. Basics of materials science and heat treatment. Engineering graphics. Basic engineering calculations. Technical thinking. Preparation of technical documentation. Individual and team work. Creativity. Honesty and reliability. Regularity. Activity.

Course objective

Transfer of theoretical and practical knowledge in a range of machine design fundamentals. Learning of structure, principles of design and calculations of mechanical devices and their elements. Acquisition of practical skills of designing on the basis of project of a screw gear.

Course-related learning outcomes

Knowledge:

1. knows design methodology and formulates design and construction assumptions.
2. identifies the state of loading and stress of machine elements.
3. selects construction materials.
4. characterizes the properties and use of joints and mechanical assemblies.
5. has structured knowledge in the field of knowledge of materials that meet the construction and

operational requirements of machines and devices, modeling of mechanical systems; strength analysis of basic mechanical constructions; has the knowledge needed to understand the principles of operation of basic machine parts, the selection of typical machine parts; knows and understands the essence of technically and technologically proper construction of machines and devices, as well as knows the economic aspects of their construction.

6. has knowledge of the technique of writing and completing technical and design documentation; knows the basic principles of organizing and conducting research in the field of energy problems and presenting the results of their work.

Skills:

1. analyzes the kinematics of designed devices.
2. shapes the construction form of machine elements.
3. calculates machine parts in terms of strength and stability.
4. designs basic construction nodes.
5. assesses variants of construction solutions.
6. uses security standards and regulations.
7. develops project documentation.

Social competences:

1. creativity and conceptual thinking. presentation of own technical solutions in the team.
2. recognizes the impact of knowledge and professional development on the level of his life and society.
3. is able to think environmentally.
4. understands the need and knows the possibilities of continuous training, raising professional, personal and social competences (eg through second and third degree studies, postgraduate studies, courses); and is ready to critically assess knowledge, recognizes its importance in solving cognitive and practical problems.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:

Lectures: Assessment of knowledge and practical skills during written exam. Additional points for knowledge, activity, interest and creativity.

Project classes: verification of individual projects. Assessment of knowledge and practical skills of design and calculation of machine elements, sketching and drawing of project solutions and unaided work and creativity. assessment of individual project and its defence in a scope of assembly and production drawings and calculations. Additional points for activity, creativity and methodology of work.

Programme content

Teaching of design methodology and elaboration of design assumptions. Training of skills of load and stress state determination of machine elements. Gaining of skills of materials selection and forming of construction shape. Acquisition of skills of tolerance and fit selection and strength calculations of machine elements for static and changing loads. Elaboration of individual project a screw gear. Skills of characterization of basic elements of power transmission systems, their calculation and selection. Making use of standards and safety regulations.

Teaching methods

Lecture: multimedia presentation and examples of structural solutions of mechanisms discussed by the teacher. Tasks for individual or group solution.

Design classes: examples of design solutions presented by the teacher. Calculation and drawing tasks to be carried out by yourself.

Breakdown of average student's workload

	Hours	ECTS
Total workload	90	3,00
Classes requiring direct contact with the teacher	40	2,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	50	2,00
