

## COURSE DESCRIPTION CARD - SYLLABUS

Course name

Enterprise Management [N2IZarz1>ZaPrz]

### Course

Field of study

Engineering Management

Year/Semester

1/1

Area of study (specialization)

Managing Enterprise of the Future

Profile of study

general academic

Level of study

second-cycle

Course offered in

polish

Form of study

part-time

Requirements

compulsory

### Number of hours

Lecture

12

Laboratory classes

0

Other (e.g. online)

0

Tutorials

0

Projects/seminars

12

### Number of credit points

4,00

### Coordinators

dr inż. Edmund Pawłowski

edmund.pawlowski@put.poznan.pl

### Lecturers

dr inż. Krystian Pawłowski

krystian.pawlowski@put.poznan.pl

dr inż. Katarzyna Ragin-Skorecka

katarzyna.ragin-skorecka@put.poznan.pl

### Prerequisites

Student has knowledge of the foundations of management conducted in first-cycle studies. In addition, he should also be able to use the acquired knowledge in practice and is ready to work within team structures.

### Course objective

The aim of the course is to provide students with knowledge about the functioning of modern enterprises of various sizes, including their structural solutions. In addition, the student learns selected management concepts used in modern enterprise, also in the aspect of sustainable development.

### Course-related learning outcomes

Knowledge:

The student defines and designates advanced methods and tools for modeling information and decision-making processes used in business management, and demonstrates their application in specific scenarios [P7S\_WG\_02].

The student describes the specifics of contextual sciences in management, names the research methods and terminology of management sciences and technical sciences, and compares them [P7S\_WG\_04]. The student characterizes the determinants of the organizational structures of the enterprise, identifies methods of their modeling and change, and explains their essence [P7S\_WG\_05]. The student recognizes and lists the characteristics and dynamics of network organizations, such as corporations, holding companies, clusters, and analyzes the organizational relationships within the enterprise [P7S\_WG\_06].

#### Skills:

The student forecasts and models complex social processes in the context of enterprise management using advanced methods and tools [P7S\_UW\_02].

The student applies the acquired knowledge in practical aspects of enterprise management including a critical analysis of the effectiveness and usefulness of applied solutions [P7S\_UW\_03].

The student independently formulates and implements solutions to management problems in an enterprise [P7S\_UW\_04].

The student effectively leads a team, taking responsibility for common tasks and teamwork [P7S\_UO\_01].

The student identifies the needs and opportunities for continuing education in the field of management and argues the need for lifelong learning [P7S\_UU\_01].

#### Social competences:

The student analyzes and presents case studies, demonstrating how an interdisciplinary approach (combining elements of management, economics, psychology, etc.) can effectively solve complex problems in enterprise management [P7S\_KK\_01].

The student analyzes causal relationships in the implementation of enterprise objectives and ranks their relevance [P7S\_KK\_02].

The student makes a substantive contribution to the preparation and management of business projects [P7S\_KO\_01].

The student plans and manages business ventures, effectively achieving enterprise objectives [P7S\_KO\_03].

The student demonstrates an understanding and application of the principles of professional behavior, professional ethics, and respect for diversity of cultures and views in the work environment by developing and presenting a team management plan that incorporates these aspects. This includes conducting an analysis of professional situations in which these elements are key and proposing specific strategies for their implementation and monitoring in professional practice [P7S\_KR\_01].

### Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Knowledge acquired during the lecture is verified by a test carried out after the last lecture. The test consists of 20 closed questions. Assessment threshold: 50% of the points (satisfactory).

Knowledge acquired under the project is verified on the basis of solving individual tasks covered by the curriculum. The student receives points for each task. Assessment threshold: 50% of the points (satisfactory).

### Programme content

Lecture: Organization as a socio-technical system and its goals (including: management concepts in organizations, enterprise management system and process), creating market advantage (cost, differential, specialization and diversification of enterprise development paths). Enterprise relational strategies. Business management paradigms in an economy based on a smart and sustainable development. Enterprise management system, structures and conditions. Divisions and services in the enterprise. Typical business processes and structural solutions of a large enterprise (including network and virtual structures). Enterprise management system design. Decision-making processes in enterprise management. Planning in company management. Enterprise culture, identity and social intelligence. Company image. Intelligent organization - features and models. Selected concepts of enterprise management: elements of information and knowledge management, lean and agile enterprise. An enterprise based on intelligent digital technologies. Basics of managing human teams in the enterprise. Project: Designing the organizational structure of the enterprise: methodology and procedure for designing the organizational structure. Creating market advantage (cost, differential, specialization and

diversification paths of enterprise development).

## Teaching methods

Monographic lecture in the form of a multimedia presentation, with elements of a seminar lecture.

Project: solving project tasks based on the case study method.
