

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Warehouse Management [S1IZarz1E>GM]

Course

Field of study

Engineering Management

Year/Semester

3/6

Area of study (specialization)

–

Profile of study

general academic

Level of study

first-cycle

Course offered in

english

Form of study

full-time

Requirements

elective

Number of hours

Lecture

15

Laboratory classes

0

Other (e.g. online)

0

Tutorials

15

Projects/seminars

0

Number of credit points

2,00

Coordinators

dr inż. Izabela Kudelska

izabela.kudelska@put.poznan.pl

Lecturers

Prerequisites

none

Course objective

To familiarize students with the essence and principles of warehouse management. Students learn basic solutions used in warehouse management.

Course-related learning outcomes

Knowledge:

The student defines key concepts related to warehouse management, including warehouse layouts and warehouse zones [P6S_WG_15].

The student describes methods of optimizing warehouse operations, including the use of technical equipment and warehouse documentation [P6S_WG_16].

The student characterizes inventory processes and health and safety rules in the context of warehouse management [P6S_WG_17].

Skills:

The student calculates pallet racking slots, warehouse modules, and forms palletized load units, using analytical methods [P6S_UW_10].

The student analyzes and optimizes warehouse processes, considering various systemic aspects [P6S_UW_11].

The student conducts a preliminary economic analysis of warehouse operations, using operational indicators [P6S_UW_12].

The student analyzes warehouse documentation and processes in terms of their efficiency [P6S_UW_13].

Social competences:

The student consciously makes decisions related to warehouse management, considering various management aspects [P6S_KO_02].

The student recognizes the responsibility for decisions related to warehouse management, taking into account their impact on the environment and society [P6S_KR_01].

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Forming note:

In the scope of tutorials:

based on student activity during classes (independent work and in groups, expressing your own views and opinions).

In the scope of lectures: based on answers to questions about the material discussed in the lectures.

Summarizing note:

In the scope of tutorials: Skills acquired as part of the tutorials are verified on the basis of developed decision algorithms and a final test, consisting of 3-4 tasks scored differently depending on their level of difficulty. Passing threshold: 60% of points.

In the scope of lectures: written credit, answers to open questions; credit is possible after obtaining a minimum of 60% of points.

Programme content

Lectures: Warehouse process from A to Z. Storage systems/storage areas. Stock distribution in the warehouse. Optimization of warehouse work. Warehouse documentation. Inventory and OHS. Technical equipment in the warehouse. Operational indicators of warehouse management.

Tutorials: Warehouse process algorithms. Warehouse documentation. Formation of pallet loading units. Calculation of row of racks. Calculation of warehouse modules. Calculation of operational indicators.

Teaching methods

In the field of lectures: informative lecture, conversational lecture.

In the scope of independent work: work with the book.

In the scope of tutorials: multimedia presentation illustrated with examples given on a blackboard and performance of tasks given by the teacher - practical exercises, subject exercises, case-based method, didactic discussion.

Bibliography

Basic:

1. Richards G., Warehouse management: A complete guide to improving efficiency and minimizing costs in the modern warehouse, Kogan Page Publishers, London, 2017.
2. Smith J.D., The warehouse management handbook, Tompkins Press, Nottingham, 1998.
3. Ten Hompel M., Schmidt T., Warehouse management, Berlin Heidelberg Emmett, Springer, 2008.
4. Emmett S., Excellence in warehouse management: how to minimise costs and maximise value, John Wiley & Sons Inc, New Jersey, 2005.

Breakdown of average student's workload

	Hours	ECTS
Total workload	50	2,00
Classes requiring direct contact with the teacher	30	1,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	20	1,00
