

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Optimization and Control in Environmental Engineering [S2IŚrod1>OiS]

Course

Field of study	Year/Semester
Environmental Engineering	1/2
Area of study (specialization)	Profile of study
Heating, Air Conditioning and Air Protection	general academic
Level of study	Course offered in
second-cycle	polish
Form of study	Requirements
full-time	compulsory

Number of hours

Lecture	Laboratory classes	Other (e.g. online)
30	15	0
Tutorials	Projects/seminars	
0	0	

Number of credit points

3,00

Coordinators

dr inż. Wojciech Góra
wojciech.gora@put.poznan.pl

Lecturers

Prerequisites

1. Basic terms of control engineering and informatics. 2. Student skills to describe the dynamic characteristics of objects and processes. 3. He has a needs of continuously of knowledge actualization.

Course objective

To teach the proper formulation of optimization problems with one or multicriteria ones. The pesentation of new directions in the field of processes control in environmental engineering. Preparation for effective cooperation with computer and control engineers for automation

Course-related learning outcomes

Knowledge:

1. Student knows basic terms utilized in optimization problems.
2. Student understands the neccessity aplication of optimization and control in environmental engineering.
3. Student utilizes the mathematical modeling and simulation methods.
4. Student knows possibilities to utilization of computer tools for monitoring and control.

Skills:

1. Student formulates the optimization tasks with one or multi criteria.
2. Student describes the demands for SCADA systems for objects and processes in environmental engineering.
3. Student describes the proper action of devices and processes in algorithmic way.

Social competences:

1. Student understands the necessity of interdisciplinary group collaboration.
2. Student approves the necessity of complex processes automation.
3. Student understands the importance of new information technology in environmental engineering.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture: written exam in the scope of the whole lecture

- theoretical questions (up to 10) with different point values
- a simple example in the field of formulation of linear optimization problems and graphical solutions

Assessment: point scale: assessment proposal; review of work - possibly oral part (only if at least 33% of points are obtained):

Score:

- up to 50% insufficient (F)
- 51% - 60% sufficient
- 61% -70% a satisfactory plus
- 71% -80% good
- 81% -90% a good plus 3
- from 91% very good

Laboratories:

- credit based on class participation
- assessment of preparation for individual exercises
- preparation of reports on tests carried out

Programme content

Optimization problems and its technical applications. Formulation of optimization problems with one criterion. Multicriteria optimization problems. Optimization methods (analytical and numerical approach). Simplex method. Nonlinear optimization.

Computer control systems: classification, Programmable Logic Controllers (PLC), microcontrollers, embedded systems. Process monitoring (examples of solutions). Control of water treatment and wastewater treatment processes. Air conditioning control (examples of solutions). Intelligent building systems (BMS).

Teaching methods

Lecture with simple calculation examples. Multimedia presentations.

Bibliography

Basic:

1. Urbaniak A., Komputerowe wspomaganie eksploatacji obiektów i procesów w systemach zaopatrzenia w wodę i oczyszczania ścieków, Wyd. Komitetu Inżynierii Lądowej i Wodnej PAN, Warszawa 2016
2. Poradnik eksploatatora oczyszczalni ścieków, Dymaczewski Z., Sozański M.M., (red.), Wyd. PZITS, Poznań 2011 r.
3. Sroczan E.M., nowoczesne wyposażenie techniczne domu jednorodzinnego, Instalacje elektryczne, Państw. Wyd. Rolnicze i Leśne, Poznań 2004 r.
4. G. Olsson, G. Piani: Computer in automation and control. Prentice Hall, New York 1995. 2.

Additional:

Breakdown of average student's workload

	Hours	ECTS
Total workload	75	3,00
Classes requiring direct contact with the teacher	45	2,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	30	1,00
