

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Municipal Systems [S2IŚrod1-ZwWOWiG>IK]

Course

Field of study

Environmental Engineering

Year/Semester

1/2

Area of study (specialization)

Water Supply, Water and Soil Protection

Profile of study

general academic

Level of study

second-cycle

Course offered in

polish

Form of study

full-time

Requirements

elective

Number of hours

Lecture

30

Laboratory classes

0

Other (e.g. online)

0

Tutorials

0

Projects/seminars

30

Number of credit points

4,00

Coordinators

dr inż. Przemysław Muszyński

przemyslaw.muszynski@put.poznan.pl

Lecturers

Prerequisites

1.Knowledge: Basic knowledge of drinking water treatment, construction and operation of simple pumping systems, construction and operation of sanitation, basic knowledge of fluid mechanics. 2.Skills: Design of water treatment plants, pump selection and the necessary fittings in pump systems, solving pumping systems, design of sanitary hot and cold water, the use of fundamental rights, depending on the mechanics of liquids and gases. 3.Social competencies Awareness of the need to constantly update and supplement knowledge and skills.

Course objective

The acquisition by the students basic knowledge, skills in designing indoor swim public and private

Course-related learning outcomes

Knowledge:

1. The student has knowledge of the classification of pools, technological solutions and functional systems for swimming pools.
2. The student has knowledge of pool water treatment and requirements for water quality as well as cleaning and maintenance requirements.

3. The student has knowledge of pool installation solutions.

Skills:

1. Selecting the right inside the pool for the application requirements.
2. Accepting the right solution of the swimming-pool..
3. Meeting the requirements of the installation and construction, as provided for individual rooms in a bathing establishment..
4. Designing a water treatment plant in the plant pool, designing a technological installation, supply and drain pool water into the basin and along the respective devices and determination of the heat demand for heating swimming pool water (heat balance).
5. Presentation of the user conduct for staff in the field of swimming pool cleaning and hygiene activities.

Social competences:

1. The student understands the need for teamwork in solving theoretical and practical problems.
2. The student sees the need for systematic deepening and extending their competence.
3. The student is aware of the social role of technical university graduate.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lectures

- a written final test students' knowledge.
- pass - 50% points.

Projects

- assessment of the correctness of the project,
- the ocean of knowledge of the scope of the project,
- continuous assessment of the students (rewarding students activity).
- pass - 50% points.

Programme content

Division of swimming pools (private, public and open, covered, with a variable cover).

Characteristics of indoor swimming pools (sports, swimming, for swimming, for non-swimmers, children, jumping, playing water polo, multi-tasking).

Technology workmanship and material troughs pools.

The quality of the water in the pool.

Systems for swimming pools (open, closed).

The functional indoor swimming pool: hygiene zone in the indoor swimming pool (dirty and clean), the basic functional groups of rooms in the plant pool (part of the overall team szatniowo spray, indoor swimming pool, heating room requirements for premises in swimming-pool

Pre-treatment of swimming pool water (requirements for catcher fibers and hairs).

Coagulation: definitions (coagulation, dispersion, colloid); types of coagulants; chemical reactions; recommended doses of coagulants; coagulant dosage conditions.

Filtration: The filtration process conditions; division of filters (non-pressure, pressure, vacuum); division filters depending on the type of filling (bed single layer, multilayer, diatomitowi enriched with activated carbon, high performance of plastic); requirements for flushing pressure filters; filtration characteristics deposits diatomaceous earth, diatomite filter stages of work.

Adjustment of the pH of pool water: causes and effects of changes in the pH of pool water; correctors pH (pH minus measures and measures pH plus); with dosing recommendations equalizer pH; chemical reactions associated with the pH adjusted with sodium carbonate

Disinfection of pool water.

Ozone treatment of swimming pool water.

Disinfection of pool water by UV rays.

Technological water systems in pools: the flow of water in the basin (requirements for the proper flow of water through the basin); water exchange systems in the basin (horizontal, vertical, horizontal-vertical); means for supplying water to the basin; means for discharging water from the basin; transfers (point, line); other drains water from the basin; steady inflow and outflow of water from the basin (symmetrical splitter, splitter simple, linear transfer from gutters); tank overflow (overflow tank tasks, open the overflow tank volume); Fresh make-up water (water losses in circulation pool, adding fresh

makeup water, filling times of the swimming pool). Adjust the water level in the expansion tank basins: structure and tasks of the regulator.

Adjust the water level in the pools without expansion tank: mechanical and electronic water level controller.

Solutions swimming pool installation: the installation of swimming pool skimmers (recommendations or requirements), installation of swimming pool gutter (recommendations or requirements).

Discharge process wastewater basin: the type of waste water and place the drain.

Cleaning and hygiene requirements in indoor swimming pools

Teaching methods

- lecture: informative (conventional).

- projects: using various sources of knowledge, classic problem method, project method.

Bibliography

Basic:

1. Sokołowski Cz.: Wymagania sanitarno-higieniczne dla krytych pływalni; PZITS, Warszawa 1998

2. Madeyski A.: Baseny kąpielowe-lecznicze i rehabilitacyjne; PZITS, Warszawa 1984r

3. Kappler H. P.: Baseny kąpielowe; Arkady, Warszawa 1977

4. Jaskólski M., Mickiewicz Z.: Wentylacja i klimatyzacja hal krytych pływalni, IPPU MASTA, Gdańsk 2000

Additional:

2. Instalacje basenowe; III Sympozjum Naukowo-Techniczne, Ustroń 2001

3. Instalacje basenowe; IV Sympozjum Naukowo-Techniczne, Ustroń 2003

4. Instalacje basenowe; V Sympozjum Naukowo-Techniczne, Ustroń 2005

5. Instalacje basenowe; VI Sympozjum Naukowo-Techniczne, Ustroń 2007

6. Instalacje basenowe; VII Sympozjum Naukowo-Techniczne, Ustroń 2009

7. Instalacje basenowe; VIII Sympozjum Naukowo-Techniczne, Ustroń 2011

Breakdown of average student's workload

	Hours	ECTS
Total workload	100	4,00
Classes requiring direct contact with the teacher	60	2,50
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	40	1,50
