COURSE DESCRIPTION CARD - SYLLABUS

Course name
Automated production systems [N1Log2>ZSP]

Course

Field of study
Logistics

Year/Semester
3/6

Area of study (specialization)
–

Profile of study
general academic

Level of study
first-cycle

Course offered in
polish

Form of study
part-time

Requirements
elective

Number of hours

Lecture
8

Laboratory classes
8

Other (e.g. online)
0

Tutorials
0

Projects/seminars
0

Number of credit points

2,00

Coordinators

dr hab. inż. Cezary Jędryczka prof. PP
cezary.jedryczka@put.poznan.pl

dr hab. inż. Mariusz Barański
mariusz.baranski@put.poznan.pl

Lecturers

Prerequisites

The student starting this subject should have basic knowledge of linear algebra, Boolean algebra, information technology and the basics of programming. He should also have the skills to obtain information from literature and technical documentation, work in a team and use IT tools, be aware of the risks when working with mechanical and electrical devices and have a sense of responsibility for the safety of other people.

Course objective

Presentation of theoretical and practical knowledge in the field of production automation and robotics.

Course-related learning outcomes

Knowledge:
1. Student knows the basic issues of design and principles of operation of automation and control systems [P6S_WG_01]

2. Student knows the basic issues of mechanics, construction and operation of industrial manipulators [P6S_WG_02]

Skills:
1. Student is able to use appropriate experimental and measurement techniques as well as software tools to solve a problem within the scope of automation and control [P6S_UW_03]
2. Student is able to notice their systemic and non-technical aspects, as well as socio-technical, organizational and economic aspects, when formulating and solving engineering tasks [P6S_UW_04]
3. Student is able to identify changes in requirements, standards, regulations, technical progress in the field of automation and control and, based on them, determine the need to supplement knowledge [P6S_UU_01]

Social competences:
1. student is aware of the initiation of activities related to the formulation and transfer of information and cooperation in society [P6S_KO_02]
2. Student is aware of the need to cooperate and work in a group to solve the problems posed [P6S_KR_02]

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture: The knowledge acquired during the lecture is verified by the 45-minute final test consists of 25-30 questions. Passing threshold 50% of points.
Laboratory: Skills acquired as part of the laboratory classes are verified on the basis of completed laboratory tasks and prepared protocols.

Programme content

Lecture: The concept of automation, automatic control system, example systems, elements and classification of control systems, tools for supervision of technological processes, SCADA systems. Controllers: tasks of controllers, types and properties of controllers, bang-bang and double bang-bang controllers, continuous PID controllers, tuning of controller settings using selected techniques. Basic concepts of robotics, types and general construction of robots, tasks of industrial robots, coordinate systems, location representation, manipulator kinematics, manipulator programming and languages on the example of KUKA and Staubli robots. Construction and operation principle of programmable logic controllers (PLC), the sweep of the controller, input and output of controllers, programming languages, basics of programming in ladder language. Construction and operation of selected sensors and measuring devices used in automation and robotics.
Laboratory: Students perform laboratory exercises related to the operation and programming of industrial manipulators, PLC controllers and automation systems.

Teaching methods

Lecture: informative lecture in the form of a multimedia presentation, conversational lecture
Laboratory: practical laboratory exercises

Bibliography

Basic:
1. Craig J.J., Wprowadzenie do robotyki: mechanika i sterowanie, WNT, Warszawa 1995.
2. Kostro J., Elementy, urządzenia i układy automatyki, WSiP, Warszawa 1998.
3. Tadeusiewicz R., Piwniak G.G., Tkaczow W.W., Szaruda W.G., Oprzędkiewicz K., Modelowanie komputerowe i obliczenia współczesnych układów automatyzacji, AGH, Kraków 2004.

Additional:
1. Springer Handbook of Automation, S.Y. Nof (Edytor), Springer, Cham 2009.

Breakdown of average student's workload

	Hours	ECTS
Total workload	50	2,00
Classes requiring direct contact with the teacher	16	1,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	34	1,00
