

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Thermodynamic calculations [S1TCh2>OT]

Course

Field of study

Chemical Technology

Year/Semester

2/3

Area of study (specialization)

–

Profile of study

general academic

Level of study

first-cycle

Course offered in

polish

Form of study

full-time

Requirements

compulsory

Number of hours

Lecture

0

Laboratory classes

0

Other (e.g. online)

0

Tutorials

30

Projects/seminars

0

Number of credit points

2,00

Coordinators

dr hab. Maciej Galiński prof. PP
maciej.galinski@put.poznan.pl

Lecturers

Prerequisites

Students: have knowledge in general chemistry (writing chemical reactions, converting concentrations, knowledge of laboratory glassware and basic laboratory equipment). have knowledge in mathematics and physics enabling the introduction of problems in physical chemistry (basic laws of physics, differential calculus). are able to prepare solutions of specific concentrations. are aware of further development of their competences.

Course objective

To familiarise students with basic problems in physical chemistry at the academic level in the field of: thermodynamic functions (the first and second laws of thermodynamics, the Gibbs free energy, thermochemistry, the thermodynamic equation of state), phase equilibrium - one-component and multi-component systems, surface and chemical equilibrium, colloidal systems and energy sources.

Course-related learning outcomes

Knowledge:

Students will be able to formulate and explain the basic theories of surface phenomena, heat engines and energy sources. K_W03, K_W10

Students will be able to define the basic concepts and laws of thermodynamics, determine the basic limitations and scope of their applicability; describe phenomena and processes in thermodynamics.
K_W03, K_W10

Skills:

Students will be able to obtain information from literature, databases and other sources; interpret it as well as draw conclusions and formulate and substantiate opinions. K_U01

Students will be able to plan and carry out measurements of basic physicochemical parameters. K_U22, K_U23

Students will be able to apply the principles of thermodynamics in the implementation of chemical processes. K_U23

Students will have the self-study skills in the subject. K_U05

Students will be able to elaborate, describe and present results of an experiment or theoretical calculations. K_U09

Social competences:

Students will be aware of the responsibility for jointly performed tasks. They will be able to work as a team. K_K03

Students will understand the need for further training and developing their professional competences. K_K01

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Exercises: grade on the basis of points obtained for activity during classes, writing test. Passing exercises from 60% .

If the classes will be held remotely, the forms of course assessments will remain unchanged and will be carried out with the use of tools provided by the Poznań University of Technology (the e-courses platform).

Programme content

Physicochemical calculations in the field of:

Chemical thermodynamics

First law of thermodynamics. Heat balance of chemical reactions. Calculation of thermal effects based on table values. Heat capacity C_v and C_p and their dependence on temperature. Standardization of thermal effects of chemical reactions. Second law of thermodynamics. Determining the direction of chemical transformation. Entropy as a state function of direction. Thermodynamic potentials - calculating the constant equilibrium of chemical reactions. Determining the effect of temperature on equilibrium constant.

Teaching methods

Exercises with discussion. Deductive method. The exercises involve solving partial tasks and solving detailed problems.

Breakdown of average student's workload

	Hours	ECTS
Total workload	50	2,00
Classes requiring direct contact with the teacher	30	1,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	20	1,00
