

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Elements of automation and measurements in chemical technology [S1TCh2>EAiPwTC]

Course

Field of study Chemical Technology	Year/Semester 3/6
Area of study (specialization) –	Profile of study general academic
Level of study first-cycle	Course offered in polish
Form of study full-time	Requirements compulsory

Number of hours

Lecture 15	Laboratory classes 0	Other (e.g. online) 0
Tutorials 0	Projects/seminars 15	

Number of credit points

2,00

Coordinators

dr hab. inż. Marek Ochowiak prof. PP
marek.ochowiak@put.poznan.pl

Lecturers

Prerequisites

As a preliminary requirement the student should have basic knowledge of chemical and process engineering, electronics and electrical engineering, construction and operation principles of process apparatus. He should also be able to analyze the obtained measurement data in the field of chemical technology and engineering as well as to perform mathematical calculations.

Course objective

Obtaining knowledge in the field of technological measurements, control and measuring apparatus in the chemical industry as well as elements of industrial automation and process control.

Course-related learning outcomes

Knowledge:

1. Has knowledge in the field of automation and industrial metrology to the extent needed to formulate and solve simple computational tasks aimed at the selection of proper instrumentation. K_W5
2. Knows the basics of control and measurement systems and control systems. K_W6
3. Has knowledge about the control of quantities and technological processes as well as metrology in chemical technology and engineering. K_W6

Skills:

1. Use the understanding of the indicated sources of knowledge (list of basic literature) and acquire knowledge from other literature sources. K_U1
2. Has the ability to present in the form of a presentation. K_U2, K_U4
3. The student is able to use knowledge to design and optimize automatic control systems and measuring systems. K_U8

Social competences:

1. Understands the need for further training and improving their professional competences as well as teamwork. K_K1, K_K3

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Lecture: Exam in the form of a test (about 20 closed questions), additional presentation. The minimum passing grade/mark (acceptance pass mark) at the exam is 51%. It is allowed to carry out pass the exam in a remote form depending on the epidemic situation.

Project: Project, presentation, oral and written answers

Programme content

As part of the classes, the following are discussed:

- Basic issues.
- Automatic adjustment systems.
- Adjustment and executive elements.
- The role of executive systems in industrial control systems.
- Regulators.
- Control stability and quality.
- Signaling, blockades and security.
- Measuring sensors.
- Measurements, measuring instruments and transducers.
- Control of quantities and technological processes in chemical technology and engineering.

Teaching methods

Multimedia presentation.

Bibliography

Basic:

1. Piekarski M., Poniewski M.: Dynamika i sterowanie procesami wymiany ciepła i masy, WNT, Warszawa 1994.
2. Kostro J.: Elementy, urządzenia i układy automatyki, Wydawnictwa Szkolne i Pedagogiczne, Warszawa 2005.
3. Gawdzik A., Tabiś B., Figiel W., Zasady sterowania procesami technologii i inżynierii chemicznej. Politechnika Krakowska, Kraków 1991.

Additional:

1. Ludwicki M., Sterowanie procesami w przemyśle spożywczym. PTTŻ Oddział Łódzki, Łódź 2002.

Breakdown of average student's workload

	Hours	ECTS
Total workload	50	2,00
Classes requiring direct contact with the teacher	30	1,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	20	1,00
