

## COURSE DESCRIPTION CARD - SYLLABUS

Course name

Plastic processing

### Course

Field of study

Management and production engineering

Area of study (specialization)

Level of study

First-cycle studies

Form of study

full-time

Year/Semester

1/1

Profile of study

general academic

Course offered in

polisch

Requirements

compulsory

### Number of hours

Lecture

15

Laboratory classes

15

Other (e.g. online)

Tutorials

Projects/seminars

### Number of credit points

2

### Lecturers

Responsible for the course/lecturer:

dr inż. Kinga Mencel

email:kinga.mencel@put.poznan.pl

ph.+48 616652787

Faculty of Mechanical Engineering

Jana Pawła II 60-965 Poznań, room 307 MC

Responsible for the course/lecturer:

### Prerequisites

Knowledge of basic physical and chemical aspects of processing of polymers

### Course objective

In-depth knowledge of the physical and physicochemical foundations of processes occurring during the processing of materials and analysis of factors affecting the technological design of products

### Course-related learning outcomes

Knowledge

1. The student has detailed knowledge of the division and classification of polymeric materials
2. The student knows the basics of manufacturing plastic products

3. The student is able to choose the appropriate technology to manufacture the product

#### Skills

1. Student has the ability to distinguish between modern manufacturing technologies.
2. Has knowledge of systems for simulation of technological processes.

#### Social competences

1. The student is aware of the importance of processing in the economy and social life.
2. The student demonstrates an active attitude in creating manufacturing processes.
3. The student is able to assess the quality of plastic product manufacturing processes.

### Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Credit on the basis of the test carried out at the end of the semester, containing general or test questions, credit if 60% of points are obtained.

### Programme content

Technological processes used in plastics processing / injection, extrusion, pressing, laminating, vacuum forming, rotational molding, production of polymer composites, rubber processing, joining plastics, coating /.

Phenomena occurring during the implementation of various plastic processing processes. Impact of technological parameters of processing processes on the properties of manufactured plastic products. Typical defects of plastic products made with different technologies and ways to prevent them.

Discussion of the specifics of individual processes and their possibilities of application in industrial practice. Special injection technologies / gas and water assisted injection technology, sandwich and mono-sandwich technologies, micro-injection /. The use of static and dynamic mixers in injection and extrusion technologies. Production of multilayer films and pipes. Processing of bio-degradable plastics. Directions of development of modern plastics processing technologies.

### Teaching methods

lecture: multimedia presentation, illustrations, sample multimedia films of technological processes

laboratories: work with devices, production of pipe and laminate products,

### Bibliography

Basic

R.Sikora - Przetwórstwo tworzyw wielkocząsteczkowych. Wyd. ZAK , Warszawa 1997

Praca zbiorowa- Poradnik inżyniera - Guma.

Additional

Haponiuk J.T.: Tworzywa sztuczne w praktyce. Wyd. Verlag Dashofer, W-wa 2008r.

Czasopisma: Plastics Review, Rubber Review, Plast News, Tworzywa Sztuczne.

**Breakdown of average student's workload**

	Hours	ECTS
Total workload	50	2
Classes requiring direct contact with the teacher	30	1,0
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation) <sup>1</sup>	20	1

<sup>1</sup> delete or add other activities as appropriate
