

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Electrical devices [N1Eltech1>UE2]

Course

Field of study

Electrical Engineering

Year/Semester

4/7

Area of study (specialization)

–

Profile of study

general academic

Level of study

first-cycle

Course offered in

Polish

Form of study

part-time

Requirements

compulsory

Number of hours

Lecture

10

Laboratory classes

10

Other (e.g. online)

0

Tutorials

0

Projects/seminars

0

Number of credit points

3,00

Coordinators

dr inż. Grzegorz Dombek

grzegorz.dombek@put.poznan.pl

Lecturers

Prerequisites

Basic knowledge on electrical engineering, electrical devices from semester 5 and electrical metrology. Able to carry out mathematical and physical analysis of phenomena occurring in power equipment and systems, knows how to read electrical diagrams. Aware of the need to expand their competences, readiness to cooperate within a team.

Course objective

Understanding the principles of operation of power equipment, systems and the role of transformer distribution stations, methods of analyzing the reliability of station work. Student is able to design the power supply and transformer-distribution station system and select the equipment. Planning the experiment, selection of measuring instruments and implementation of the testing system as well as carrying out tests and processing the results.

Course-related learning outcomes

Knowledge:

Student knows how to explain the principle of operation of power equipment. Knows the basic systems of distribution stations, the way they work, methods of analyzing the reliability of station work.

Skills:

Student is able to design the power supply and distribution station system. Student is able to carry out calculations and analyzes necessary for the selection of devices in power distribution stations. Student is able to plan the experiment, select the system and testing devices, carry out tests and develop the results of measurements.

Social competences:

Student is aware of the impact of the correct selection of the power distribution station system and devices on ensuring continuity of electricity supply to various consumers. Student is aware of the impact of phenomena and devices and distribution stations on the environment and people working on and using power equipment.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:

Lecture:

- knowledge acquired as part of the lecture is verified by a written final exam consisting of open or test questions with different points. Passing threshold: 50% of points,
- current grading in each lecture (rewarding activities).

Laboratory classes:

- current check and rewarding knowledge necessary for the accomplishment of the problems in the area of laboratory tasks,
- evaluation of reports performed on laboratory classes,
- rewarding activities related to the implementation of laboratory classes.

Programme content

The module program covers the following topics:

1. Electrical power switches.
2. High-voltage switches.
3. Instrument transformers.
4. Devices and main circuits of electrical power stations.
5. Auxiliary devices and devices for managing the operation of electrical power stations.

Course topics

Lecture:

1. Power switches – classification and basic parameters of switches
2. High-voltage switches – circuit breakers, disconnectors, isolators, fuses, earthing switches, short-circuit breakers
3. Current, voltage and combined transformers.
4. Main devices and circuits of power stations – station connection systems, transformers and autotransformers, station design solutions.
5. Auxiliary devices at power stations – station's own needs, limiting short-circuit currents, lightning and surge protection, power station operation control devices.

Laboratories:

1. Discussion of classes: topics, literature, requirements, reports, health and safety
2. Intermittent operation of current paths
3. Parallel operation of transformers
4. Testing of selected current transformer systems - 1f systems
5. Testing of current transformer systems used in three-phase networks
6. Testing of time-current characteristics of motor circuit breakers
7. Testing of voltage transformer
8. Summary of classes, reports and credit

Teaching methods

Lecture:

- multimedia or object-oriented presentations supported by illustrated examples presented on the board,
- interactive lecture with questions and initiating discussions.

Laboratory classes:

- object-oriented presentations supported by illustrated examples presented on the board,
- presentations of selected experiments,
- initiating teamwork.

Bibliography

Basic

Breakdown of average student's workload

	Hours	ECTS
Total workload	70	3,00
Classes requiring direct contact with the teacher	20	1,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	50	2,00
