

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Mathematics [S1iChiP1>MAT2]

Course

Field of study

Chemical and Process Engineering

Year/Semester

1/2

Area of study (specialization)

–

Profile of study

general academic

Level of study

first-cycle

Course offered in

Polish

Form of study

full-time

Requirements

compulsory

Number of hours

Lecture

30

Laboratory classes

0

Other (e.g. online)

0

Tutorials

30

Projects/seminars

0

Number of credit points

5,00

Coordinators

dr inż. Mariola Skorupka

mariola.skorupka@put.poznan.pl

Lecturers

Prerequisites

Student has basic knowledge of elementary functions, algebraic operations, analytical geometry, trigonometry and mathematical analysis. Students should be able to solve simple rational equations and inequalities, to give domains of elementary functions and to know their curves. Students seriously treat the process of studying.

Course objective

The aim of subject is introduction to complex numbers and their some practical applications. Differential and integral calculus of one variable are presented together with their applications in mathematics and chemistry.

Course-related learning outcomes

Knowledge:

after completing the first degree studies, the graduate has expanded and in-depth knowledge of various branches of higher mathematics and detailed knowledge on the application of mathematical methods and tools in engineering and chemical sciences - k_w2

Skills:

after completing the first degree studies, the graduate:

- can use knowledge of higher mathematics; can build and analyse simple mathematical models; can use mathematical tools and methods, including numerical ones, to solve engineering problems - k_u13
- is able to plan and implement self-education independently in order to raise and update their competences - k_u24

Social competences:

after completing the first degree studies, the graduate:

- is aware of the deepening and expansion of knowledge to solve newly created technical problems - k_k1
- understands and appreciates the importance of intellectual honesty in own and other people's actions; is ready to demonstrate reliability, impartiality, professionalism and an ethical attitude - k_k1

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:

Lecture - written exam during session

Tutorials - two long test + activity

Assessment criteria:

below 50% - 2,0 50%-59% - 3,0 60%-69% - 3,5

70%-79% - 4,0 80%-89% - 4,5 90%-100% - 5,0

Programme content

MATRIX CALCULUS.

INTEGRAL CALCULUS OF TWO VARIABLE FUNCTIONS.

DOUBLE INTEGRAL.

ORDINARY DIFFERENTIAL EQUATIONS.

Course topics

1. Matrices. Arithmetic operations for matrices. Determinants of matrices (Laplace's expansions with respect to rows or columns). Properties of determinants. Inverse matrices.
2. Solutions of Cramer's systems of linear algebraic equations using determinants and inverse matrices.
3. Rank of matrices. Kronecker-Capelli theorem.
4. Gauss-Jordan elimination method of solving systems of linear algebraic equations (systems with one solution, with infinitely many solutions or without solutions). Inverse matrices obtained by Gauss-Jordan elimination procedure.
5. Definition of the function of many variables. Geometric interpretation of function of two variables. Domain of functions. Partial derivatives of I and II order of function of two and three variables. Schwarz's theorem about mixed derivatives. Direct derivative of functions. Gradient of functions. Differentials of function – some applications.
6. Local extrema of functions of two and three variables. The smallest and the greatest values of functions on some regions.
7. Double integrals over regions normal with respect to: the axis OX, the axis OY. Change of variables in double integrals.
8. Application of the double integral.
9. Ordinary differential equations of I and II order: introduction. Solutions of ODE of I order with separated variables, homogeneous, linear nonhomogeneous (Lagrange's method and method of variation of parameters - undetermined coefficients), Bernoulli's equations and the exact equations. Solutions of ODE of II order which can be transformed to ODE of I order and equations of II order with constant coefficients.

Teaching methods

Lecture - multimedial presentation + examples on the blackboard

Tutorials - solving problems; discussion about obtained results

Bibliography

Basic

Breakdown of average student's workload

	Hours	ECTS
Total workload	130	5,00
Classes requiring direct contact with the teacher	70	3,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	60	2,00
