

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Universal design II [N2IŚrod2>PUII]

Course

Field of study	Year/Semester
Environmental Engineering	1/2
Area of study (specialization)	Profile of study
Heating, Air Conditioning and Air Protection	general academic
Level of study	Course offered in
second-cycle	Polish
Form of study	Requirements
part-time	compulsory

Number of hours

Lecture	Laboratory classes	Other (e.g. online)
0	10	0
Tutorials	Projects/seminars	
0	0	

Number of credit points

1,00

Coordinators

dr inż. Przemysław Muszyński
przemyslaw.muszynski@put.poznan.pl
dr hab. inż. Alina Pruss prof. PP
alina.pruss@put.poznan.pl

Lecturers

Prerequisites

Basic information from the course: Universal Design I (1st cycle). The ability to obtain information from the indicated sources and the willingness to cooperate as part of the team.

Course objective

Provide students with basic knowledge of the principles of universal design, corresponding to the current social, economic and labor market needs. The aim of the course is to increase acquired competencies (knowledge and skills) by introducing new forms of education, based on a human-centered approach to designing private and public space.

Course-related learning outcomes

Knowledge:

The student has a detailed knowledge of the principles of universal design.

The student has a basic knowledge of the possibilities and limitations in the functioning of people with

various needs, both in biological, psychological, and social aspects.

Skills:

The student knows how to empathize with the role of a person with limitations.

The student knows how to use GERT-type old-age simulators.

The student can design a space prepared for people with limitations (the elderly, people with disabilities, parents with young children).

The student knows how to use computer software that supports the design process.

Social competences:

The student sees the need to systematically deepen and expand their competences.

The student understands the need for teamwork in solving theoretical and practical problems.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

The skills acquired during the laboratory classes are verified on the basis of a final test, a test consisting of five tasks with different scores depending on the degree of their difficulty and on the basis of the developed installation design, taking into account the principles of universal design for the selected object. Passing threshold: 50% of points.

Programme content

Workshops with the use of GERT-type old age simulators, which allow young people to survive and understand age-related limitations by simulating changes in the human body. In the second part of the course, students after the workshop experience will use the principles of universal design in the arrangement of public space and / or living space, taking into account the individual or collective needs of people with disabilities and the elderly.

Course topics

During the course, students will be able to personally test various types of aids allowing for age simulation, simulation of hemiparesis, simulation of back pain, spine defect simulation, simulation of dyspnea in chronic obstructive pulmonary disease (COPD), simulations of hearing loss and tinnitus, simulations of visual impairment, simulations hand tremors, unsteady gait simulations, knee mobility restriction simulations, knee pain simulations. People who try the above-mentioned simulators will be able to feel the difficulties faced by people with limitations. Students dressed in the simulators mentioned above will explore the facilities of the Poznan University of Technology, paying particular attention to the availability of sanitary facilities, lifts, etc. They will first-hand experience the difficulties people with various limitations may face, which will facilitate their approach to designing public buildings.

The implementation of projects is aimed at creating new solutions that respond to the changing needs of users over time. It is also important to acquire teamwork skills.

Teaching methods

Discussion, multimedia presentation, work with source materials, work with tools for creating a
