

**COURSE DESCRIPTION CARD - SYLLABUS****Course name**

Manufacturing and processing of materials [S1Lot1-SLiPL&gt;WiOM]

**Course**

Field of study	Year/Semester
Aviation	2/4
Area of study (specialization)	Profile of study
Aircraft Engines and Airframes	general academic
Level of study	Course offered in
first-cycle	Polish
Form of study	Requirements
full-time	compulsory

**Number of hours**

Lecture	Laboratory classes	Other (e.g. online)
15	15	0
Tutorials	Projects/seminars	
0	0	

**Number of credit points**

2,00

**Coordinators**

dr inż. Waldemar Matysiak  
waldemar.matysiak@put.poznan.pl

**Lecturers****Prerequisites**

Basic knowledge of mathematics, physics and materials science. Logical thinking skills, using information sources (library, Internet) and understanding the need to learn and acquiring new knowledge.

**Course objective**

Learning about the three basic technologies for producing machine parts, i.e. plastic processing (methods metal forming in the production of parts and operation of machines, and introduction with machines and equipment for metal forming), foundry (casting methods and basics of the casting technology simulation process) and machining (machining methods, cutting tools, process course and its physical, technological and economic effects).

**Course-related learning outcomes**

none

**Methods for verifying learning outcomes and assessment criteria**

Learning outcomes presented above are verified as follows:

## Lecture:

Written assessment carried out at the end of the semester (pass if obtaining at least 50.1% correct answers). Up to 50.0% - ndst, from 50.1% to 60.0% - dst, from 60.1% to 70.0% - dst+, from 70.1 up to 80.0 - db, from 80.1% to 90.0% - db+, from 90.1% - very good.

## Lab:

Assessment criteria based on oral or written answer regarding the content of each activity laboratory exercise, report on each laboratory exercise as indicated conducting laboratory exercises. To pass the laboratories, all exercises must be completed be passed (positive grade for answers and reports).

## Programme content

Information about plastic shaping of metals and their alloys. Technological operations for shaping products from sheets and bars. Properties of materials when shaping products using plastic processing methods.

Defects in products and methods of prevention as well as examples of technological processes.

Molding sands. Production of castings in disposable and permanent molds.

Casting design. Casting alloys. Destructive and non-destructive testing of castings.

Types and varieties of cutting. Conditions for cutting to occur. Cutting parameters and the basis for their selection. Materials for blades and cutting tools. Blade wear and durability. Tribological aspects.

Machinability. Top layer.

## Course topics

### I) PART I. Forging

#### Lecture:

1. Basic theoretical knowledge about the plastic shaping of metals and their alloys (conditions plasticity, plastic deformation mechanism).
2. Technological operations of shaping products from sheet metal (cutting, bending, stamping) and rods (forging, rolling, extrusion, drawing).
3. Materials susceptible to plastic processing.
4. Changing the properties of materials when shaping products using plastic forming methods.
5. Defects in products and methods of prevention as well as examples of technological processes,

#### Lab:

1. Cutting sheet metal using guillotine and circular shears.
2. Pressing a cylindrical extrudate using a hydraulic press.
3. Volumetric plastic working processes - forging and extrusion.
4. Pressing a rectangular extrusion using a hydraulic press.
5. Longitudinal and transverse rolling using laboratory rolling mills.

### II) PART II. Foundry

#### Lecture:

1. Main and auxiliary molding materials and methods of testing the properties of molding sands.
2. Methods of producing castings in disposable and permanent molds.
3. Introduction to casting design.
4. Technological properties of selected casting alloys. Crystal structure of alloys foundry.
5. Methods of destructive and non-destructive testing of castings.

#### Lab:

1. Research on selected properties of molding/core sands.
2. Making castings by hand molding.
3. Die casting.
4. Computer simulation of selected foundry processes.
5. Identification and assessment of features of castings obtained by various methods.

### III) PART III. Machining

#### Lecture

1. Types and varieties of cutting. Conditions for cutting to occur (material decohesion).
2. Technological and geometric cutting parameters and the basis for their selection.
3. Materials for blades and cutting tools. Blade wear and durability.
4. Accuracy and actual and theoretical roughness of the machined surface.
5. Selected tribological aspects. Machinability of various workpiece materials. Characteristic

top layer.

Lab

1. Technological capabilities of milling and drilling machines (machine tool, tools, process)
  2. Technological capabilities of lathes and grinders (machine tool, tools, process).
  3. Construction of cutting tools and analysis of tool materials
  4. Assessment of the geometric and physical features of the surface layer after various processing methods
- PART - 66 (THEORY - 3.75 hours, PRACTICE 11.25 hours)

#### MODULE 6. MATERIALS AND EQUIPMENT

6.2 Aircraft construction materials not containing iron

- a) Characteristics, properties and identification of non-ferrous materials used to build aircraft;

Heat treatment and use of iron-free materials; [2]

### Teaching methods

Lecture: multimedia presentation, illustrated with examples given on the board.

Laboratory: performing tasks given by the teacher - practical exercises.

### Bibliography

Podstawowa

Literatura podstawowa:

I) CZĘŚĆ I. Obróbka plastyczna

1. Erbel S., Kuczyński K., Marciniak Z.: Obróbka plastyczna. Warszawa: PWN 1986.
2. Morawiecki M., Sadok L., Wosiek E.: Teoretyczne podstawy technologicznych procesów przeróbki plastycznej, Wyd. Śląsk, 1986
3. Z. Marciniak: KONSTRUKCJA TŁOCZNIKÓW, Ośrodek Techniczny A. Marciniak, Warszawa, 2002.

II) CZĘŚĆ II. Odlewnictwo

1. Praca zbiorowa red. J. Jackowski, Podstawy odlewnictwa. Ćwiczenia laboratoryjne. Wyd.PP, Poznań 1993.
2. Szweycer M., Nagolska D., Metalurgia i odlewnictwo, Wyd. PP, Poznań 2002.
3. Perzyk M. i inni , Odlewnictwo, WNT Warszawa 2004
4. Tabor A., Odlewnictwo , Wyd. Politechniki Krakowskiej, Kraków 2007

III) CZĘŚĆ III. Obróbka skrawaniem

1. Dul-Korzyńska B.: - Obróbka skrawaniem i narzędzia. Oficyna Wydawnicza Politechniki Rzeszowskiej 2009.

#### **Breakdown of average student's workload**

	Hours	ECTS
Total workload	0	0,00
Classes requiring direct contact with the teacher	0	0,00
Student's own work (literature studies, preparation for laboratory classes/tutorials, preparation for tests/exam, project preparation)	0	0,00
