

COURSE DESCRIPTION CARD - SYLLABUS

Course name

Information technology in construction [S2Bud1E-IPB>TIwB]

Course

Field of study

Civil Engineering

Year/Semester

1/2

Area of study (specialization)

Construction Engineering and Management

Profile of study

general academic

Level of study

second-cycle

Course offered in

English

Form of study

full-time

Requirements

compulsory

Number of hours

Lecture

15

Laboratory classes

15

Other

0

Tutorials

0

Projects/seminars

0

Number of credit points

2,00

Coordinators

dr inż. Henryk Gierszal

Lecturers

Prerequisites

The student has basic knowledge of the basics of construction; The student is able to obtain information from the indicated sources and analyze engineering activities undertaken; The student is aware of the need to constantly update and supplement construction knowledge and take responsibility in professional work; The student is aware of the existence of information issues in construction

Course objective

The student's acquisition of basic knowledge and skills in the field of information technology in construction.

Course-related learning outcomes

Knowledge:

1. Know in detail currently utilised construction materials and products, their properties and testing methods as well as production and assembly technologies.
2. Have detailed knowledge in the field of operation algorithms of selected software supporting the analysis and design of building facilities, which are also useful to plan and manage construction projects, including Building Information Modelling (BIM).
3. Have detailed knowledge of geodesic compilations and measurement methods applied in implementation, inventory, diagnostic and control works in building investment process.

Skills:

1. Use advanced specialized tools in order to search for useful information, communication and in order to obtain software supporting the designer and organizer of building engineering works.
2. Be able to prepare an introductory economic analysis of proposed solutions and undertaken engineering activities; can prepare a cost calculation and a work schedule, contract and business plan of a building project; are able to manage building processes, define duties and tasks in investment and building control.
3. Can estimate hazards of building projects and building operation, implement suitable safety rules and prepare work standards as well as quality management procedures.

Social competences:

1. Take responsibility for the reliability of working results and their interpretation.
2. Understand the need to transfer to the society the knowledge about building engineering, transfer the knowledge in a clear and easily comprehensible manner.
3. Are ready to think and act in a business-like way.

Methods for verifying learning outcomes and assessment criteria

Learning outcomes presented above are verified as follows:

Learning outcomes presented above are verified as follows:

As a form of measuring / assessing student work, a final test is carried out (during the last class)

Grade scale determined% from:

- 90 very good (A)
- 85 good plus (B)
- 75 good (C)
- 65 sufficient plus (D)
- 55 satisfactory (E)
- below 54 insufficient (F)

Programme content

- Lecture 1 - Introduction,
- Lecture 2 - Introduction to Information Technology
- Lecture 3 - Introduction to Information Technology II
- Lecture 4 - Introduction to Information Technology III
- Lecture 5 - Introduction to information technologies in construction
- Lecture 6 - Information technology - practical aspects
- Lecture 7 - Information technology - practical aspects II
- Lecture 8 - Information technology - practical aspects III
- Lecture 9 - Information technology in construction - practical aspects
- Lecture 10 - The use of information technologies in construction
- Lecture 11 - Use of information technologies in construction II
- Lecture 12 - Use of information technologies in construction III
- Lecture 13 - Examples - information technology in construction
- Lecture 14 - Examples - information technology in construction II
- Lecture 15 - Credit
- Laboratories 1 - Introduction
- Laboratories 2 - Practical aspects of information technology
- Laboratories 3 - Practical aspects of information technology II
- Laboratories 4 - Practical aspects of information technology III
- Laboratories 5 - Practical aspects of information technology IV
- Laboratories 6 - Practical aspects of information technology V
- Laboratories 7 - Practical aspects of information technology VI
- Laboratories 8 - Credit

Course topics

none

Teaching methods

Pyramid discussion; Panel discussion; The classic problem method; Teaching games; Exchange of ideas; Informative lecture; Problem lecture; Conversational lecture; Program text; Work with a book; Talk; Lecture reading; Demonstration method; Laboratory method; Production exercise method; Method of experiments; Observation and measurement method; Project method; Leading text method; Workshop method; Show.

Breakdown of average student's workload

	Hours	ECTS
Total workload	60	2,00
Classes requiring direct contact with the teacher	30	1,00
Student's own work (literature studies, preparation for laboratory classes/ tutorials, preparation for tests/exam, project preparation)	30	1,00
